2010

Banyak cara yang bisa kita lakukan untuk membuat website. Bisa dimulai dengan membuat blog, profil pribadi, koleksi foto, tip & trik, sampai ke yang lebih rumit membuat toko online. Semuanya bisa dilakukan secara manual, bahkan otomatis tanpa harus mengerti bahasa pemrograman.

Dengan Joomla! salah satunya. Kita bisa membuat jenis website apa saja dengan singkat, sangat dinamis, mudah digunakan, fitur sangat lengkap, gratis, dengan dukungan komunitas yang sangat besar. Anda pun bisa melakukannya.

Tentang Penulis.....76

Mengapa Harus Joomla!?

Sejak pertama kali berkenalan, saya sudah sangat tertarik dengan Joomla!. Sebab, dengan tanpa pengetahuan bahasa pemrograman php dan mysql, saya bisa membangun sebuah website dalam waktu tidak lebih dari 5 menit. Sungguh, sangat menakjubkan! Padahal, kalau membuat dari awal, tentu akan memakan waktu yang sangat lama. Belum lagi harus memahami dulu bahasa pemrograman yang akan digunakan.

Meskipun sangat cepat dan mudah, kita tetap harus membuat konsep akan seperti apa website kita nantinya. Apakah website pribadi, toko online, koran online, atau yang lainnya. Dengan konsep yang dirumuskan dengan jelas, proses modifikasi dan memasukkan data akan lebih cepat.

Apa yang Harus Disiapkan?

Kali ini, saya tidak akan membahas cara menginstal dan memodifikasi Joomla! di komputer lokal. Saya akan langsung membahas cara instalasi secara online. Dengan demikian, yang harus disiapkan adalah domain dan hosting. Supaya lebih mudah, cari hosting yang memiliki fasilitas fantastico.

Sebagai contoh, saya menginstal template, komponen, modul, plugin, dan menulis artikel. Jika Anda ingin menginstal yang sama, silakan gunakan materi yang saya bahas. Jika ingin berbeda, silakan download komponen, modul, dan plugin di <http://extensions.joomla.org/>. Cara menginstalnya bisa mengikuti cara yang saya lakukan. Sedangkan untuk template, silakan cari dan download di <http://joomla24.com> atau yang lainnya.

7 Langkah Menginstal Joomla!

Beberapa penyedia hosting menyediakan fantastico yang menyimpan koleksi script pembuat website. Salah satunya Joomla!. Melalui fitur ini, pelanggan dimudahkan dalam proses instalasi website yang diinginkannya. Jika membuat sendiri, tentu saja tidak bisa menggunakan fantastico.

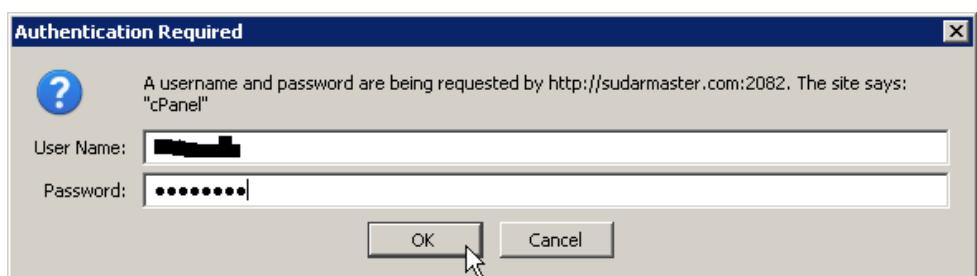

Sebelum bisa menginstalnya, pastikan Anda sudah menyewa [domain dan hosting](#). Setelah diaktifkan, Anda akan diberi username dan password untuk mengakses cpanel, ftp, dan yang lainnya.

Jika sudah, silakan ikuti langkah berikut.

1. Buka browser internet (Mozilla, Internet Explore, Safari, dll) lalu ketik namadomain.com/cpanel. Tekan Enter.

2. Masukkan username dan password yang diberikan lalu klik OK.

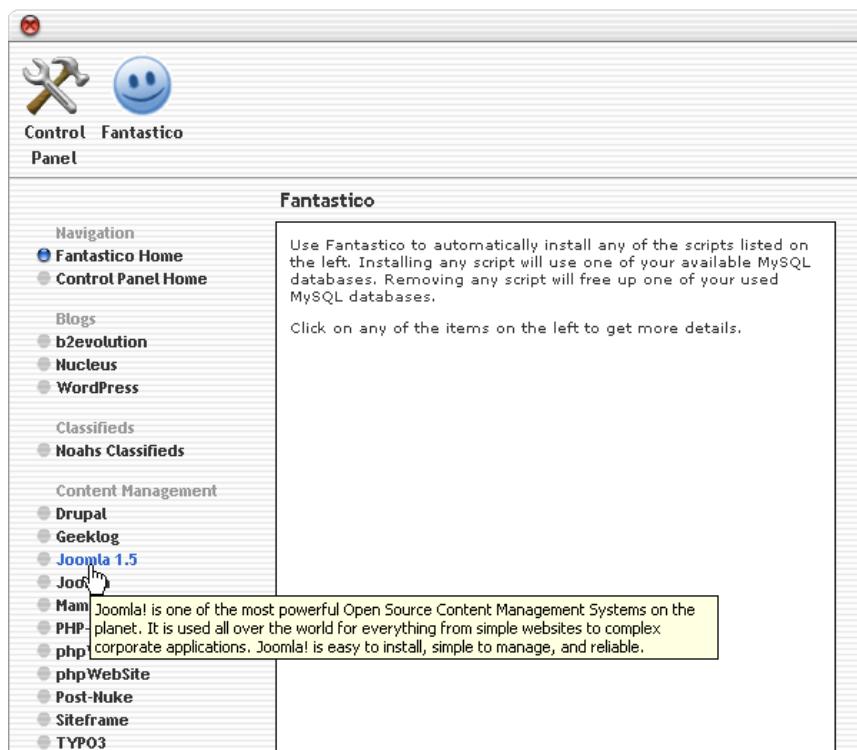

3. Klik Fantastico De Luxe.

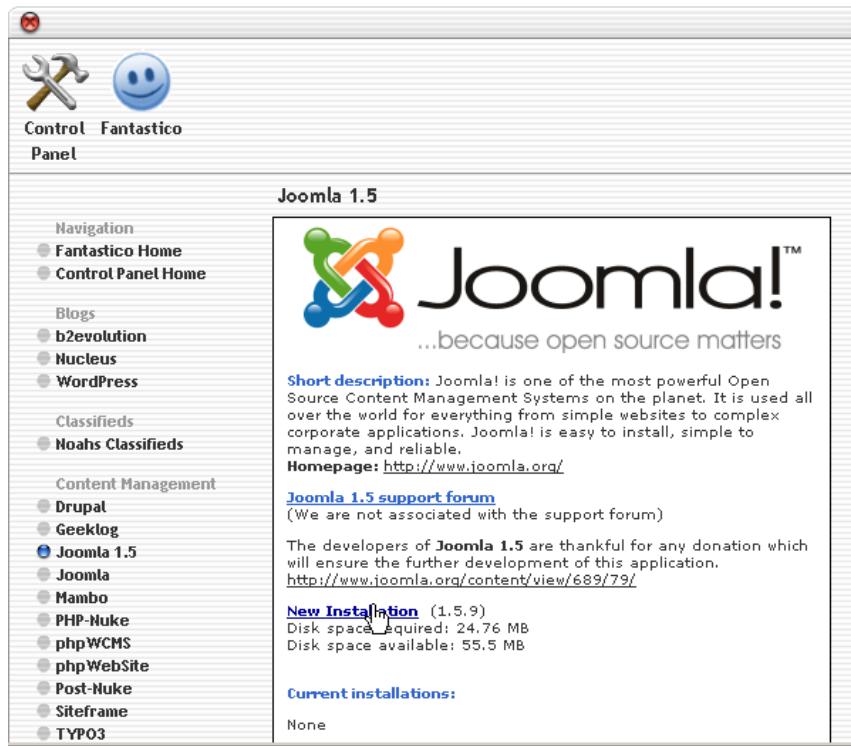

4. Klik Joomla 1.5.

5. Klik New Installation.

6. Isi formulir yang disediakan lalu klik Install Joomla 1.5.

Joomla!™
...because open source matters

Install Joomla 1.5 (1/3)

Installation location

Install on domain Pilih domain.

Install in directory Ketik nama folder. Jika ingin langsung pada domain, tidak usah diisi.

Leave empty to install in the root directory of the domain (access example: <http://domain/>). Enter only the directory name to install in a directory (for <http://domain/name/> enter **name** only). This directory SHOULD NOT exist, it will be automatically created!

Admin access data

Administrator-username (you need this to enter the protected admin area)
 Password (you need this to enter the protected admin area)

Base configuration

Admin e-mail (your email address) Ketik username dan password untuk masuk ke halaman admin.

Admin full name

Site name Isi email admin, nama, dan situs.

Install Sample Data?

Install Joomla 1.5

7. Klik Finish Installation.

Jika sukses, akan tampil seperti gambar berikut.

Sampai tahap ini sudah selesai. Website sudah jadi, selanjutnya tinggal memodifikasi. Supaya lebih mudah, rencanakan dari awal akan membuat website apa. Kalau tidak, akan sering bongkar pasang.

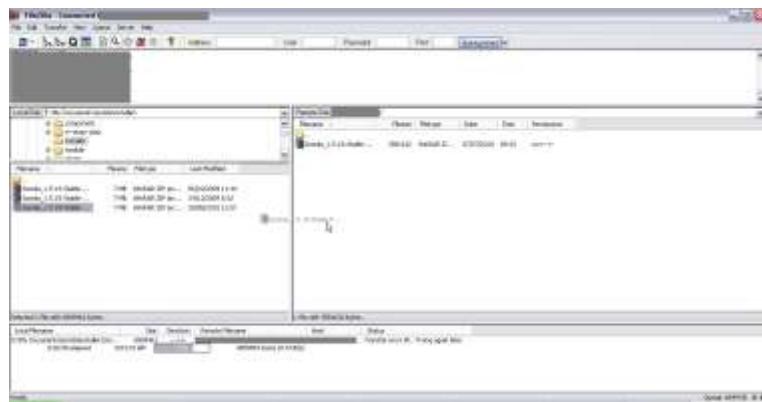

Pada bab berikutnya, saya akan memberikan contoh cara memodifikasi dengan mengganti template, menginstal komponen, modul, dan plugin. Masalah selera, pasti berbeda. Jadi, baca dulu sampai habis, baru mencari bahan untuk memodifikasi website Anda. Jika sudah ditemukan, coba praktikan dengan mengikuti tutorial yang saya buat.

Menginstal Joomla! Secara Manual di Hosting

Versi Joomla! di [hosting](#) biasanya kurang up to date. Jika kebetulan di fitur fantastico versinya masih yang lama, sebaiknya menginstal manual saja. Prosesnya sama saja dengan menginstal di localhost. Caranya sebagai berikut.

1. Upload file Joomla! yang baru didownload ke hosting menggunakan FileZilla.

2. Masuk ke cpanel lalu klik MySQL® Databases.

3. Ketik nama database lalu klik Create Database.

4. Setelah selesai, ketik username dan password pada bagian MySQL Users.

MySQL Users

Add New User

Username:	admin	
Note: seven characters max		
Password:	*****	
Password (Again):	*****	
Strength (why?):	Strong (76/100)	Password Generator
Create User		

- Pada bagian Add User To Database, pilih nama user dan nama database yang baru dibuat, lalu klik Add.

Add User To Database

User:	[REDACTED]
Database:	[REDACTED]
Add	

- Akan muncul Manage User Privileges. Pilih All Privileges lalu klik Make Changes.

Manage User Privileges

User: [REDACTED]
Database: [REDACTED]

<input checked="" type="checkbox"/> ALL PRIVILEGES	
<input checked="" type="checkbox"/> SELECT	<input checked="" type="checkbox"/> CREATE
<input checked="" type="checkbox"/> INSERT	<input checked="" type="checkbox"/> ALTER
<input checked="" type="checkbox"/> UPDATE	<input checked="" type="checkbox"/> DROP
<input checked="" type="checkbox"/> DELETE	<input checked="" type="checkbox"/> LOCK TABLES
<input checked="" type="checkbox"/> INDEX	<input checked="" type="checkbox"/> REFERENCES
<input checked="" type="checkbox"/> CREATE TEMPORARY TABLES	<input checked="" type="checkbox"/> CREATE ROUTINE

[Make Changes](#)

- Jika proses upload sudah selesai, kembali ke Home cpanel lalu klik File Manager.

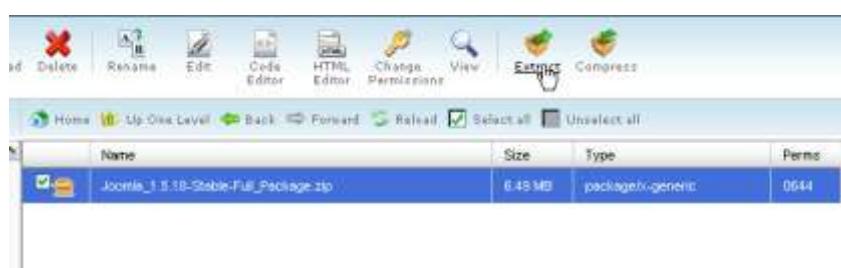

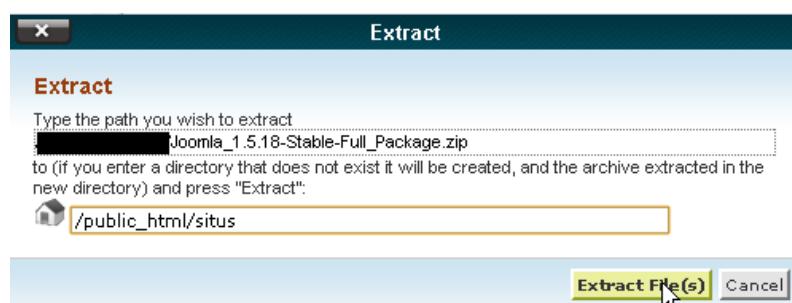

8. Pilih direktori lalu klik Go.

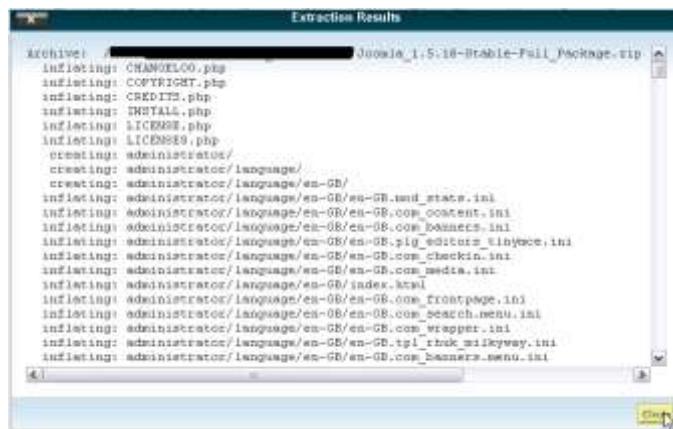

9. Ceklis file Joomla! lalu klik Extract.

10. Klik Extract File(s).

11. Klik Close.

12. Buka domain Anda. Pilih bahasa (misalnya, Bahasa Indonesia) lalu klik Berikutnya.

13. Klik Berikutnya.

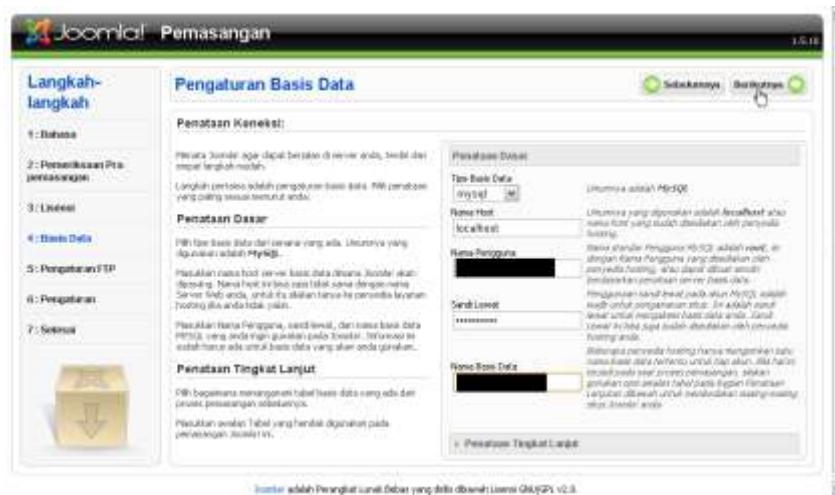

14. Klik Berikutnya.

15. Masukkan nama user dan password database yang tadi dibuat, serta nama databasenya. Lalu, klik Berikutnya.

16. Pilih Ya, lalu masukkan username dan password FTP.

17. Klik Otomatis Temukan Jalur FTP lalu klik Berikutnya.

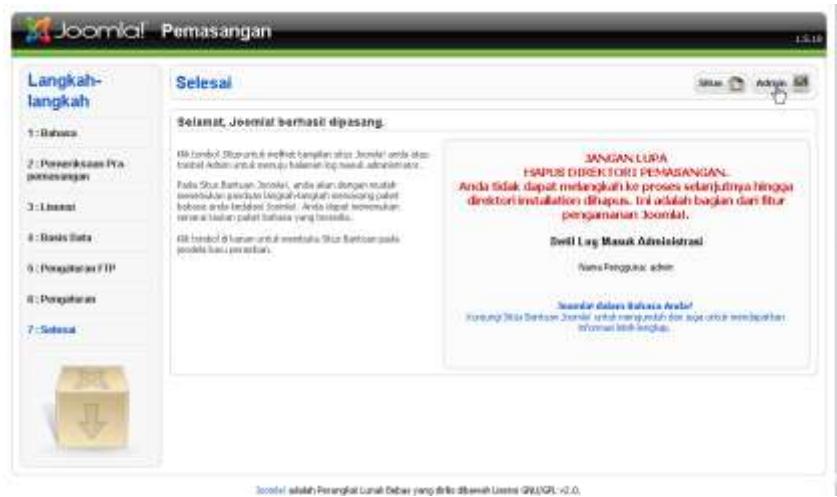

18. Klik Pasang Contoh data.

19. Masukkan nama situs, alamat email, dan password. Lalu, klik Berikutnya.

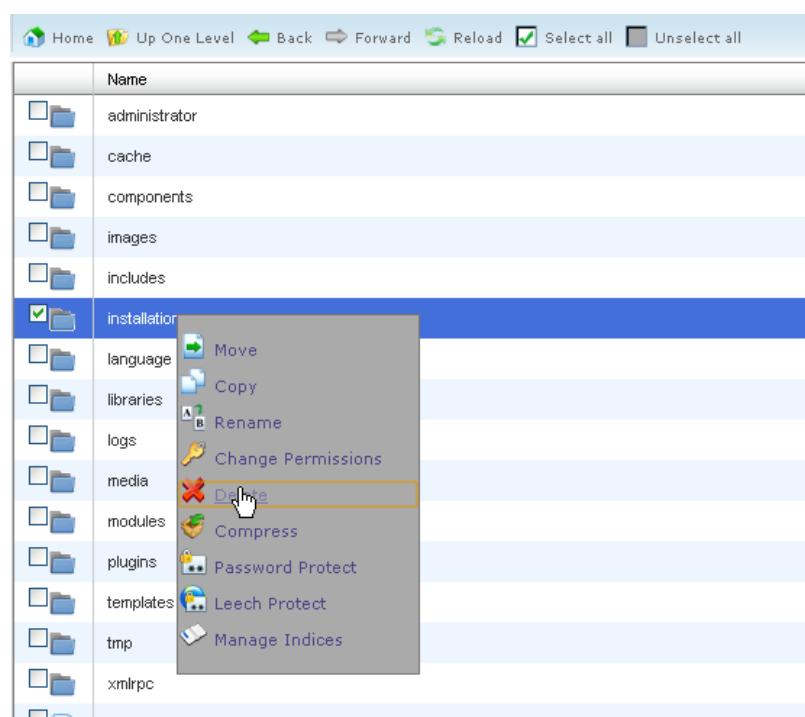

20. Instalasi sudah selesai. Anda harus menghapus folder installation.

21. Kembali ke File Manager di hosting. Klik kanan folder installation lalu klik Delete. Bisa juga dihapus menggunakan FileZilla.

22. Klik Delete File (s).

www.sudarma.info | www.sudarmaster.com | www.hostamasta.com | www.webtamasta.com

23. Halaman utama situs ketika pertamakali diinstall seperti gambar berikut.

24. Coba masuk ke halaman administrator.

Hasilnya seperti gambar berikut.

25. Mumpung masih baru, segera ganti metadata pada Global Configuration. Jika tidak diubah, ketika didaftarkan di mesin pencari, deskripsi situs kita masih bawaan dari Joomla!.

Metadata Settings

Global Site Meta Description	Situsku - segala sesuatu tentang Joomla!
Global Site Meta Keywords	joomla, Joomla
Show Title Meta Tag	<input type="radio"/> No <input checked="" type="radio"/> Yes
Show Author Meta Tag	<input type="radio"/> No <input checked="" type="radio"/> Yes

Menginstal Ekstensi secara Online

Pernah mengalami masalah ketika menginstal ekstensi Joomla! yang sudah online? Ada sedikit perbedaan dengan cara menginstal di localhost. Kita harus memasukkan username dan password ftp supaya bisa menginstalnya. Username dan password ftp ini biasanya diberikan ketika domain dan hosting kita diaktifkan. Jika pertamakali menginstal tidak melakukan konfigurasi ftp, silakan periksa di Global Configuration, pada tab Server.

The screenshot shows the 'FTP Settings' section of the Joomla Global Configuration. It includes fields for 'Enable FTP' (set to 'Yes'), 'FTP Host' (127.0.0.1), 'FTP Port' (21), 'FTP Username' (empty), 'FTP Password' (empty), and 'FTP Root' (empty). A cursor is hovering over the 'FTP Root' field.

Jika sudah, ikuti langkah berikut untuk menginstal ekstensi. Kali ini saya akan menginstal modul status online Yahoo! Messenger pada Joomla! 1.5.18.

1. Klik menu Extensions > Install/Uninstall.

2. Masukkan username dan password ftp.
3. Klik Pilih Berkas.
4. Pilih modul lalu klik Open.

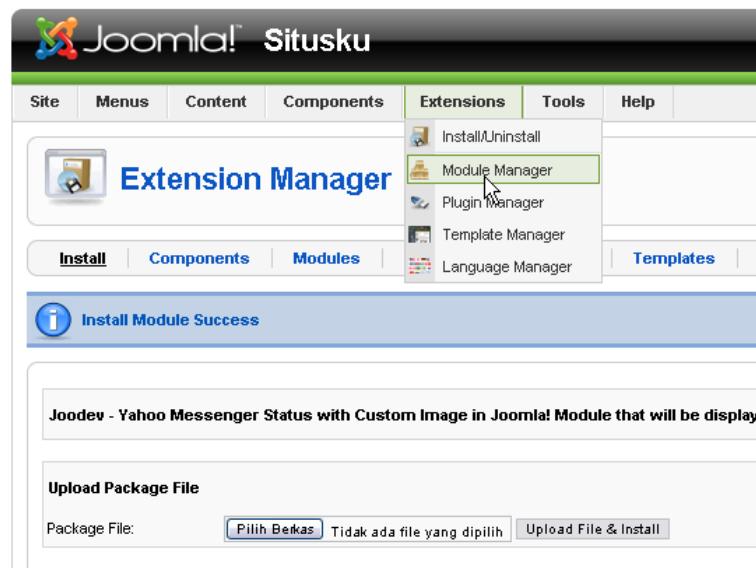

5. Klik Upload File & Install.

FTP Login Details
For installing or uninstalling Extensions, Joomla! will most likely need your FTP account details. Please enter the details below:
Username: [REDACTED]
Password: [REDACTED]

Upload Package File
Package File: mod_jodev_y..._J1.5.x.zip

6. Klik Extensions > Module Manager.

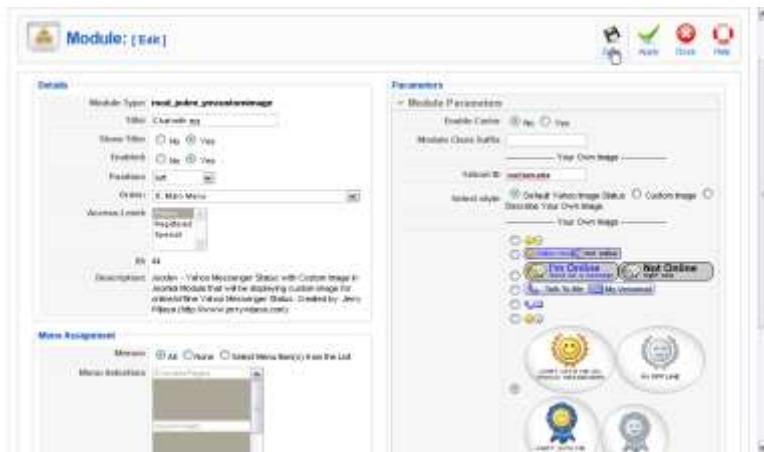

7. Klik modul yang diinstal.

16	<input type="checkbox"/>	Easy Adsense
17	<input type="checkbox"/>	Joodev - Yahoo Messenger Status Custom Image
18	<input type="checkbox"/>	Polls
19	<input type="checkbox"/>	Who's Online

8. Atur sesuai keinginan lalu klik Save.

Hasilnya seperti gambar berikut.

Saya mencoba instal ekstensi ini tanpa mengubah folder permission. Jika Anda gagal melakukan cara ini, mungkin coba ubah folder permission lalu ulangi langkah dari awal.

Mengganti Template

Tampilan pertamakali diinstal, tampak sederhana. Kemungkinan besar, Anda pun sama seperti saya, tidak menyukainya. Untuk lebih jelasnya, Anda bisa melihat gambar di bawah ini.

Kali ini saya mengganti dengan template dari siteground. Cara menggantinya sebagai berikut.

1. Ketik namadomain.com/administrator. Masukkan username dan passwordnya lalu klik Login.

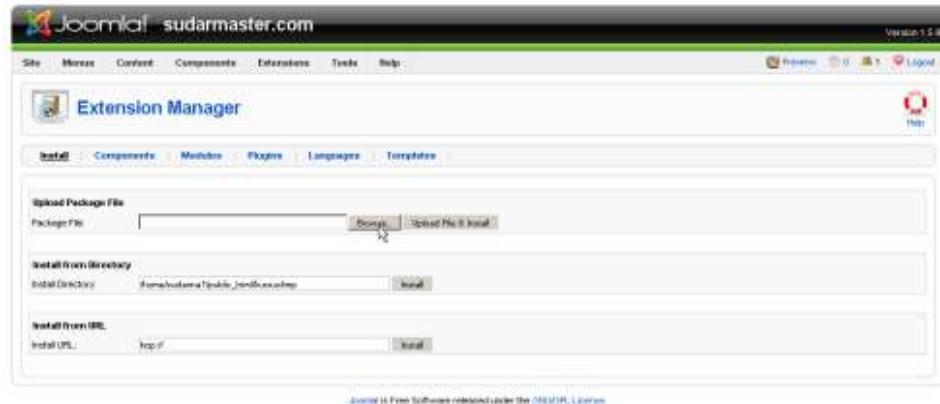

2. Klik Install/Uninstall.

3. Klik Browse.

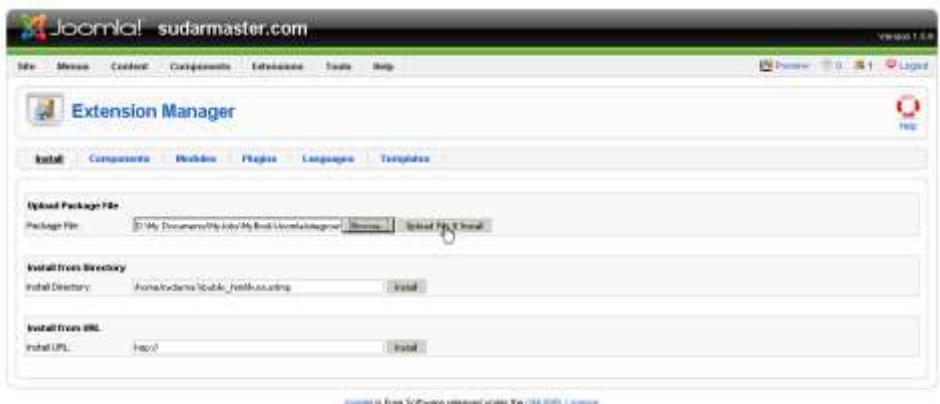

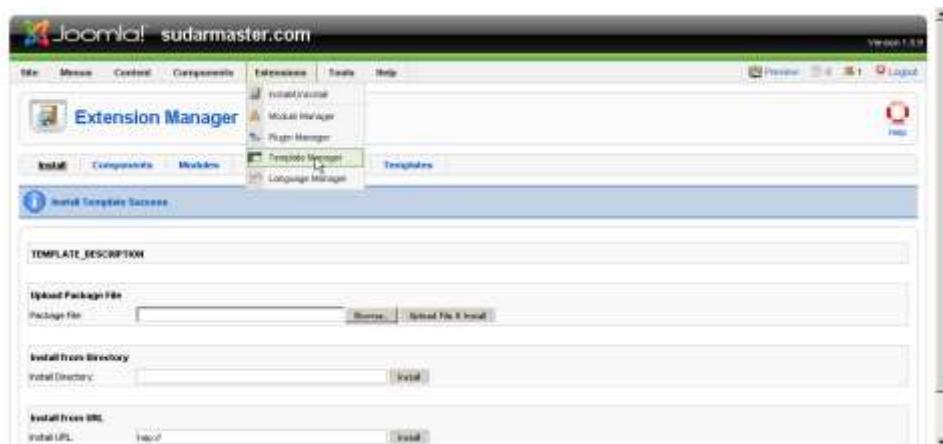

4. Pilih template lalu klik Open.

5. Klik Upload File & Install.

6. Klik Template Manager.

7. Klik siteground-j15-68 lalu klik Default.

Hasilnya seperti gambar berikut.

The screenshot shows the homepage of sudarmaster.com. At the top, there is a navigation bar with links for "About Journal", "Features", "News", "The Community", and "Contact Us". Below the navigation bar, there is a search bar containing the text "sudarmaster". A message in the search bar area states: "Yesterday's search was for 'sudarmaster' at 11:22 am and today it's 'sudarmaster' again. It appears you need to log in or register to use our search feature. You can do this by clicking here." The main content area displays search results for "sudarmaster". There are two main sections of results:

- Recent Issues**: This section lists a single issue: "Volume 8 Number 1" from Saturday, 25 July 2009. The issue has 8 pages and is written by an anonymous author.
- Recent Reviews**: This section lists a single review: "Sudarmaster - A Journal of Social Justice, Economic Justice and Political Activism" from Saturday, 25 July 2009. The review is written by an anonymous author and has 1 page.

On the right side of the page, there are several sidebar sections:

- Editorial Staff**: Lists the names of the managing editor, executive editor, editor-in-chief, and other staff members.
- Who's Online**: Shows 0 users currently online.
- Advertisement**: Features an ad for "Sudarmaster - The most popular web-based journal in Asia."
- Reader Feedback**: Shows 0 reviews posted.
- Author Information**: Shows 0 authors listed.
- User Information**: Shows 0 users registered.

At the bottom of the page, there is a footer with the text "sudarmaster.com | Sudarmaster Journal | Sudarmaster is a trademark of Sudarmaster Foundation | © 2008 Sudarmaster Foundation | All rights reserved".

Mengatur Tata Letak Modul

Setelah menginstal beberapa modul, barangkali tampak tidak menarik dilihat dari komposisinya di halaman muka. Selain itu, banyak modul juga yang tidak diperlukan. Untuk itu, kita harus mengatur posisi dan mendisable/menghapus modul yang tidak perlu.

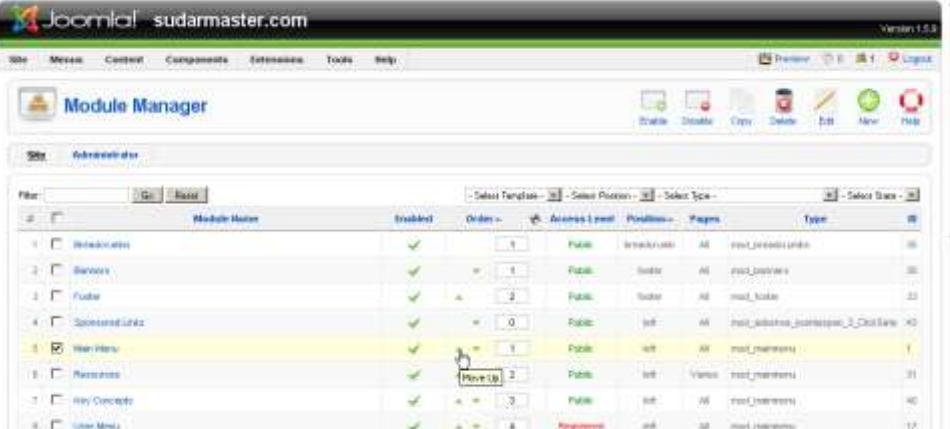

Caranya sebagai berikut.

1. Klik Extensions > Module Manager.

The screenshot shows the Joomla! 1.5.8 administrator dashboard. The top menu bar includes Site, Menus, Content, Components, Extensions, Tools, and Help. The Extensions menu is currently active, with 'Module Manager' highlighted. Below the menu, there are several management links: ADD New Article, Article Manager, Front Page Manager, Section Manager, Category Manager, Media Manager, File Manager, Language Manager, User Manager, and Global Configuration. On the right side of the screen, there is a 'Welcome to Joomla!' message and a 'Security' section with tips for securing the site.

2. Klik tanda panah kecil pada kolom order, baik ke bawah maupun ke atas untuk menyeduaiakan posisinya.

The screenshot displays the 'Module Manager' page. It lists various modules with columns for Module Name, Enabled, Order, Access Level, Position, Pages, and Type. A module named 'User Menu' is highlighted with a yellow background. The 'Order' column contains small arrows for adjusting the module's position. The 'Pages' column shows which pages the module is assigned to, and the 'Type' column indicates if it's a 'Module' or 'Component'.

Module Name	Enabled	Order	Access Level	Position	Pages	Type
Blank module	✓	1	Public	Inset header	All	mod_blank
Blank	✓	2	Public	Inset	All	mod_blank
Footer	✓	3	Public	Inset	All	mod_footer
Spamcontrol	✓	4	Public	left	All	mod_spamcontrol_block
User Menu	✓	5	Public	left	All	mod_menu
Process	✓	6	Public	left	All	mod_process
My Content	✓	7	Public	left	All	mod_content
User Menu	✓	8	Protected	left	All	mod_menu

3. Klik tanda ceklis pada kolom Enable untuk menyembunyikannya.

#	Name	Enabled	Type	Access	Module	Order
6	Advertiser	<input checked="" type="checkbox"/>	Public	all	mod_advertiser	10
7	User Groups	<input checked="" type="checkbox"/>	Public	all	mod_usergroups	11
8	User Menu	<input checked="" type="checkbox"/>	Protected	all	mod_menu	12
9	Content Pages	<input checked="" type="checkbox"/>	Public	all	mod_pages	13
10	Statistics	<input checked="" type="checkbox"/>	Public	all	mod_stats	14
11	Login Form	<input checked="" type="checkbox"/>	Public	all	mod_login	15
12	Archives	<input checked="" type="checkbox"/>	Public	all	mod_archives	16
13	Search	<input checked="" type="checkbox"/>	Public	all	mod_search	17
14	Product Item	<input checked="" type="checkbox"/>	Public	all	mod_product_item	18
15	Wishlist	<input checked="" type="checkbox"/>	Public	all	mod_wishlist	19
16	Feedbacks	<input checked="" type="checkbox"/>	Public	all	mod_feedback	20
17	Help	<input checked="" type="checkbox"/>	Public	logged	mod_help	21
18	Mark Online	<input checked="" type="checkbox"/>	Public	logged	mod_markonline	22
19	Advertiser	<input checked="" type="checkbox"/>	Public	logged	mod_advertiser	23
20	Finance Design	<input checked="" type="checkbox"/>	Public	logged	mod_financedesign	24

Hasil akhirnya, kira-kira seperti gambar berikut.

sudarmaster.com

Introduction

Joomla makes it easy to launch a Web site of any kind, whether you want a business site or just a new building a large online community, Joomla allows you to display a Web site in stunning and easy-to-use functionality as you need it. The hundreds of available extensions will help to expand your site and allow you to deliver new services that extend your reach and the Joomla!

Login Form

Written by admin
Submitted: 19 August 2007 06:01

The Login Form is designed to look like the Joomla! User's Login Form. It is a simple form that allows users to log in to their Joomla! account. The form includes fields for email address and password, and a checkbox for "Remember Me". The user can also choose to "Forgot Password?" or "Create New Account?". The form is styled to match the Joomla! User's Login Form.

Menyembunyikan Halaman Administrator

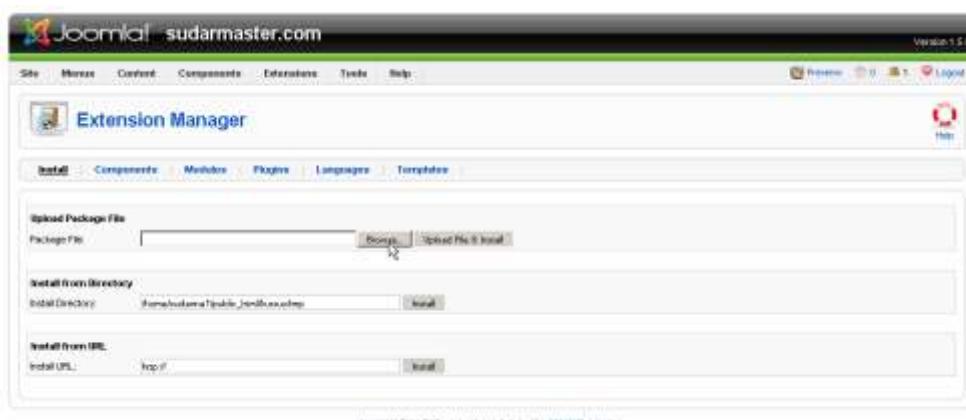

Karena Joomla! merupakan open source, setiap orang bisa mempelajari dan memodifikasinya. Tentu saja, banyak orang yang sudah familiar. Salah satunya untuk mengakses halaman administrator. Sebaiknya url administrator ini disembunyikan sebagai salah satu cara untuk mengamankan website kita. Banyak cara untuk menyembunyikannya. Salah satunya menggunakan plugin jsecure.

Cara menginstalnya sebagai berikut.

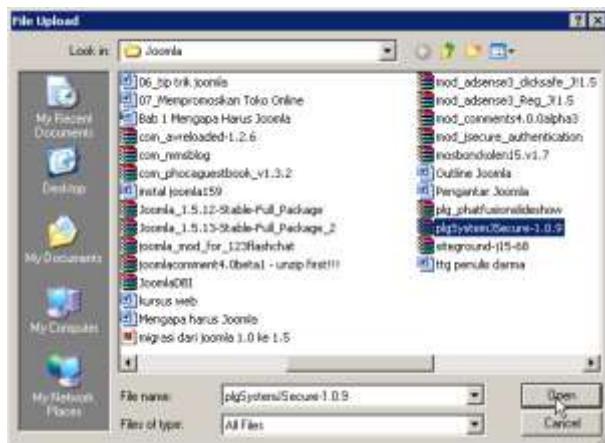

1. Klik Install/Uninstall.

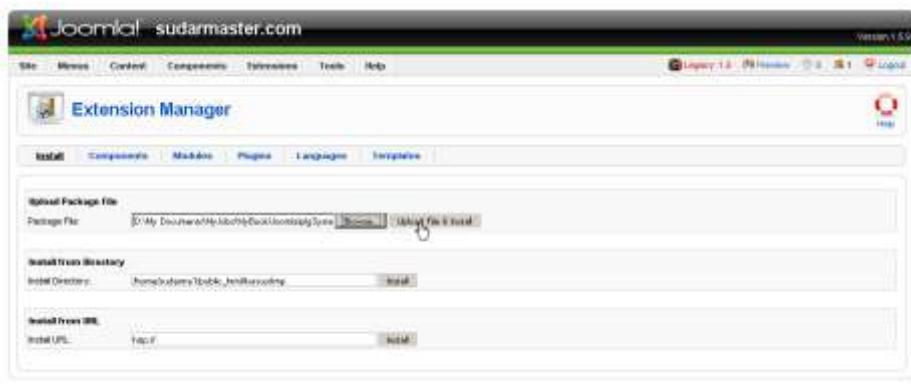

2. Klik Browse.

3. Pilih plugin jsecure lalu klik Open.

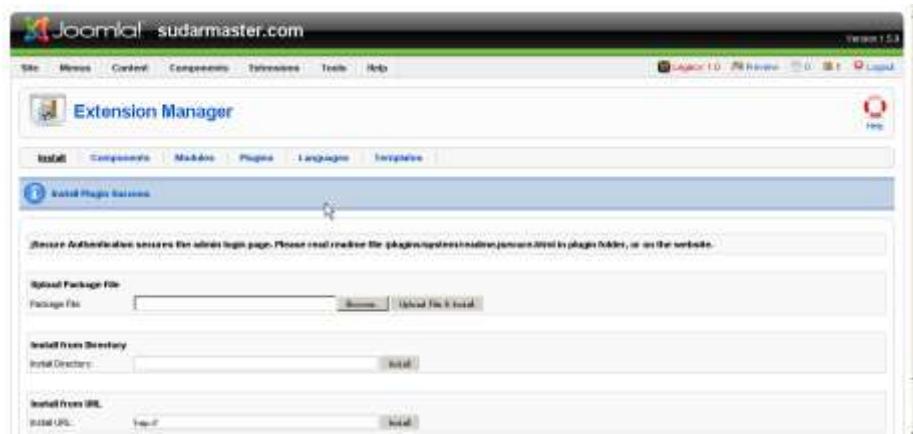

4. Klik Upload File & Install.

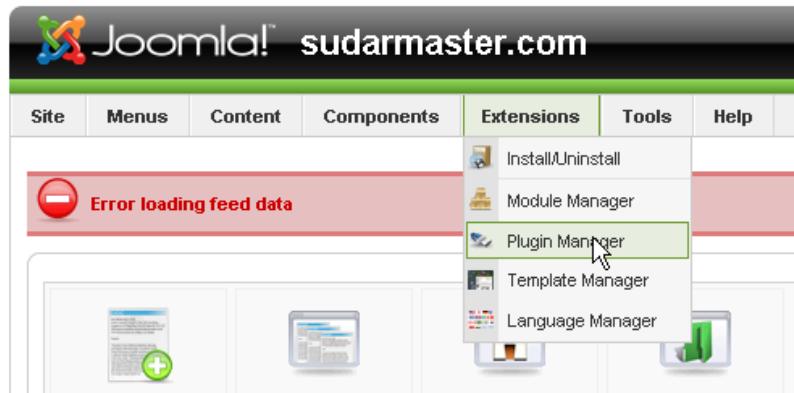

Plugin berhasil diinstal.

5. Klik Extensions > Plugin Manager.

6. Klik System – jSecure Authentication.

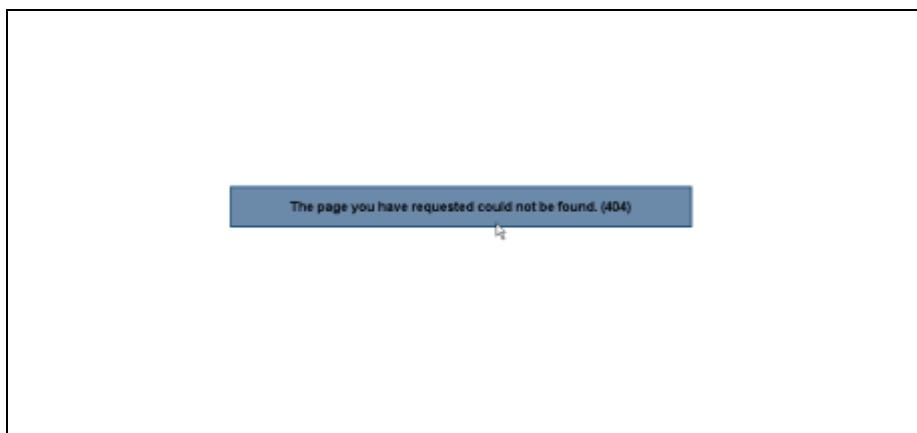

www.sudarma.info | www.sudarmaster.com | www.hostamasta.com | www.webtamasta.com

7. Ketik key yang mudah diingat lalu klik Save.

Saat membuka namadomain.com/administrator, tampilannya menjadi seperti ini.

Untuk masuk ke halaman admin, silakan ketik namadomain.com/administrator/?key.

Jangan sampai Anda lupa key tersebut. Sebab, kalau lupa, kemungkinan besar Anda tidak akan bisa masuk ke halaman administrator.

Menginstal Modul Adsense

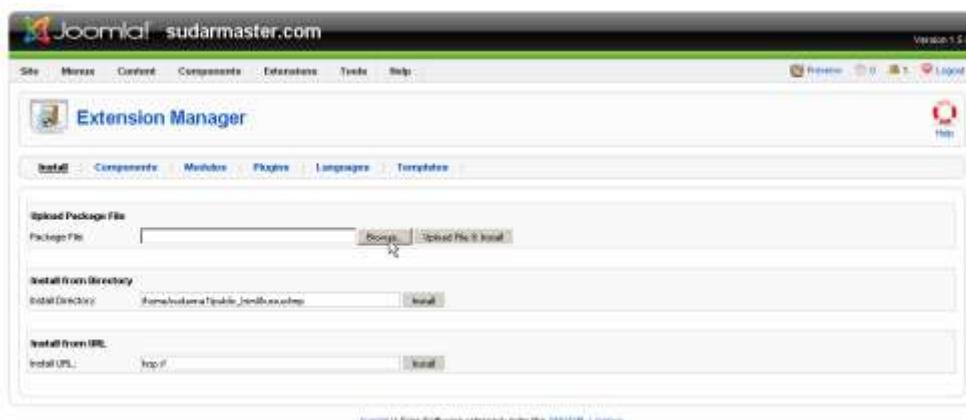

Kalau Anda biasa menggunakan adsense di blog, di Joomla! juga bisa dipasang. Tentu saja, bahasa yang digunakan harus bahasa Inggris karena Google adsense belum mendukung bahasa Indonesia (hanya fitur pencarian saja).

Untuk menginstalnya, silakan ikuti langkah berikut.

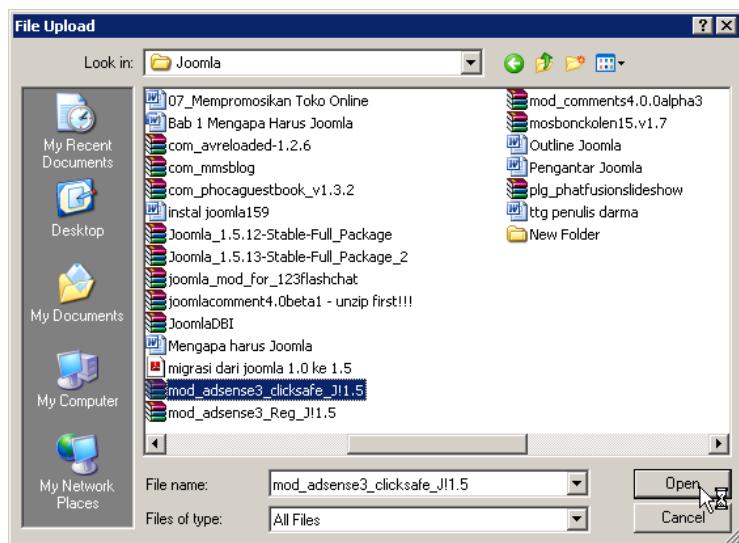

1. Klik Install/Uninstall.

2. Klik Browse.

3. Pilih modul adsense lalu klik Open.

4. Klik Upload File & Install.

5. Klik Extensions > Module Manager.

6. Klik Sponsored Links.

<input type="checkbox"/> View Options	<input checked="" type="checkbox"/>	Public	int	10	mod_adSense	47
<input type="checkbox"/> User Menu	<input checked="" type="checkbox"/>	Public	int	10	mod_menu	17
<input type="checkbox"/> Frontend Pages	<input checked="" type="checkbox"/>	Public	int	10	mod_menu	39
<input type="checkbox"/> Statistics	<input checked="" type="checkbox"/>	Public	int	1000	mod_stats	20
<input type="checkbox"/> Log In/Out	<input checked="" type="checkbox"/>	Public	int	1000	mod_login	13
<input type="checkbox"/> Access	<input checked="" type="checkbox"/>	Public	int	1000	mod_access	23
<input type="checkbox"/> Secure	<input checked="" type="checkbox"/>	Public	int	1000	mod_secure	24
<input type="checkbox"/> Sponsored Links	<input checked="" type="checkbox"/>	Public	int	1000	mod_adSense_Signed	26
<input type="checkbox"/> Webmail	<input checked="" type="checkbox"/>	Public	int	1000	mod_webmail	33
<input type="checkbox"/> Feed Reader	<input checked="" type="checkbox"/>	Public	int	1000	mod_reader	34
<input type="checkbox"/> Joomla! Links	<input checked="" type="checkbox"/>	Public	int	1000	mod_joomlaLinks	43
<input type="checkbox"/> Wiki	<input checked="" type="checkbox"/>	Public	int	1000	mod_wiki	44
<input type="checkbox"/> Web Forms	<input checked="" type="checkbox"/>	Public	int	1000	mod_webforms	21
<input type="checkbox"/> Advertisement	<input checked="" type="checkbox"/>	Public	int	1000	mod_adverts	35
<input type="checkbox"/> Random Image	<input checked="" type="checkbox"/>	Public	int	1000	mod_randomImage	36

7. Pilih Yes pada Enabled dan isi Publisher ID lalu klik Save.

Pilih Yes.

Isi Publisher ID.

Module: [Edit]	
<input checked="" type="checkbox"/> Enabled Save <input type="checkbox"/> Apply <input type="checkbox"/> Close <input type="checkbox"/> Help	
Details Module Title: mod_adSense_jomsense_3_ClickSafe Title: Sponsored Links Show Title: <input checked="" type="radio"/> Yes Position: left Order: 0-Sponsored Links Access Level: Public Registered Special Social ID: 43 Description: <i>AdSense for Joomla! - The easiest way to implement AdSense ads in your Joomla! website. Just enter your AdSense publisher ID and click 'Save'.</i>	
Parameters Module Parameters <small>If 'Basic' and other advanced optional features are included in Advanced Parameters below:</small> Module Class Suffix: mod_adSense Site CSS Class: mod_adSense Publisher ID: pub-8590779424 Channel number: Ad Type: Text and image (default) Corner Styles: Slightly rounded corners Ad layout: 120x240 Vertical Banner Header Color: #000000 Background Color: FFFFFF Link Color: #0000FF	

Atur posisi modulnya lalu refresh tampilan muka website. Hasilnya seperti gambar berikut.

Membuat Buku Tamu

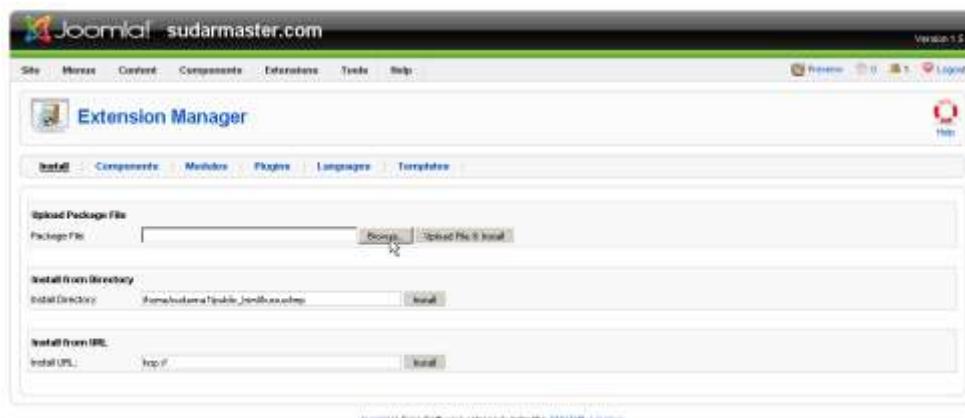

Berkomunikasi dengan pengunjung selain sebagai ajang silaturahmi, bisa juga membuat pengunjung setia kembali mengunjungi website kita. Salah satu fitur yang bisa kita tambahkan adalah buku tamu.

Cara menginstalnya sebagai berikut.

1. Klik Install/Uninstall.

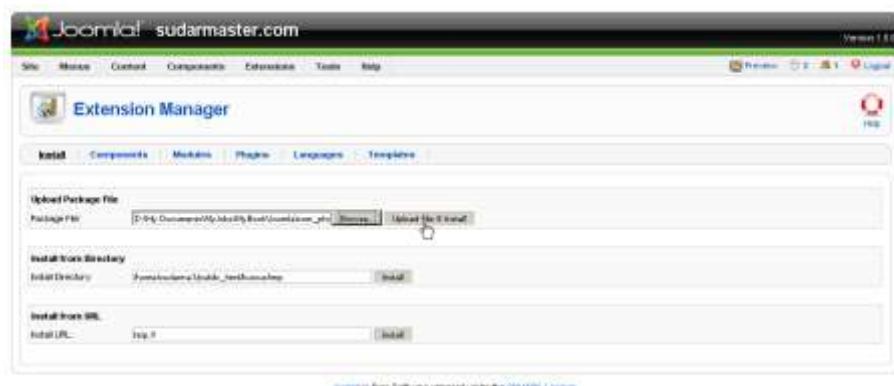

2. Klik Browse.

3. Pilih komponen phocaguestbook lalu klik Open.

4. Klik Upload File & Install.

5. Klik Install.

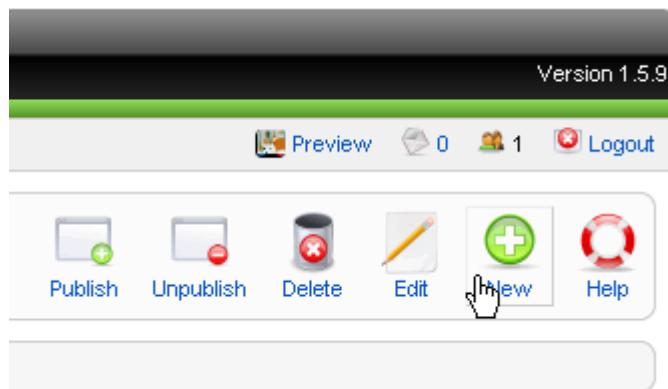

6. Klik Guestbooks.

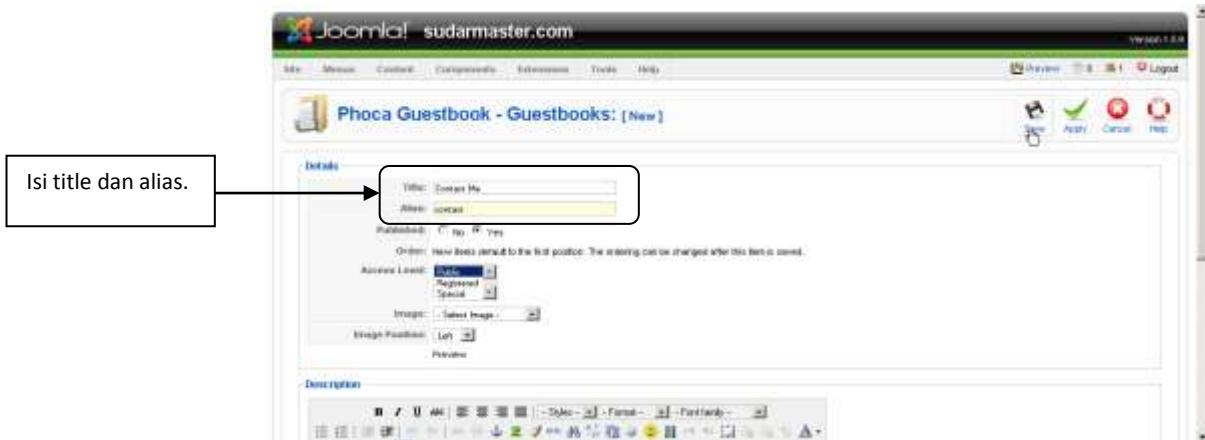

7. Klik New.

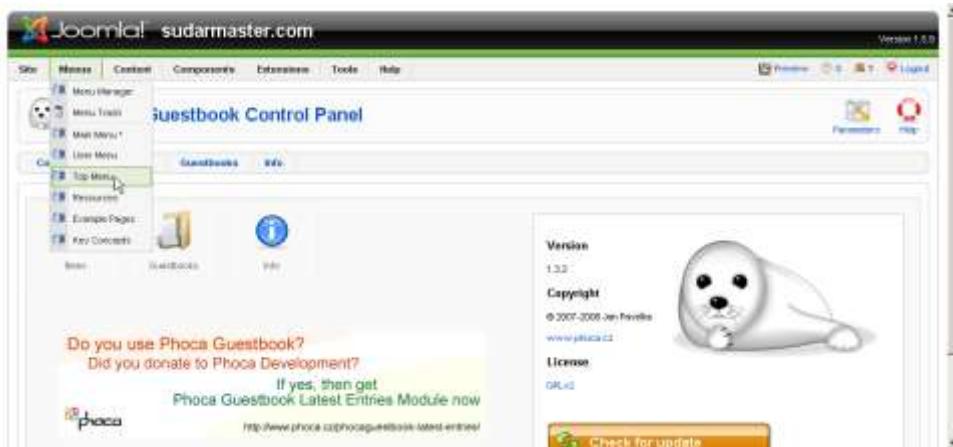

8. Isi title dan alias lalu klik Save.

9. Klik Menu > Top Menu (boleh memilih posisi menu yang lain).

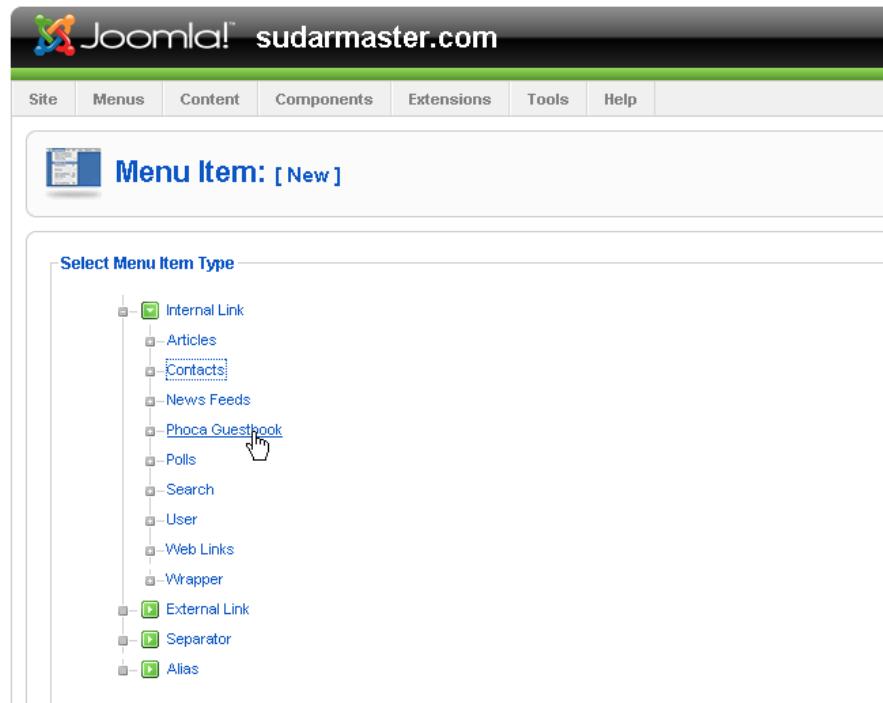

10. Klik New.

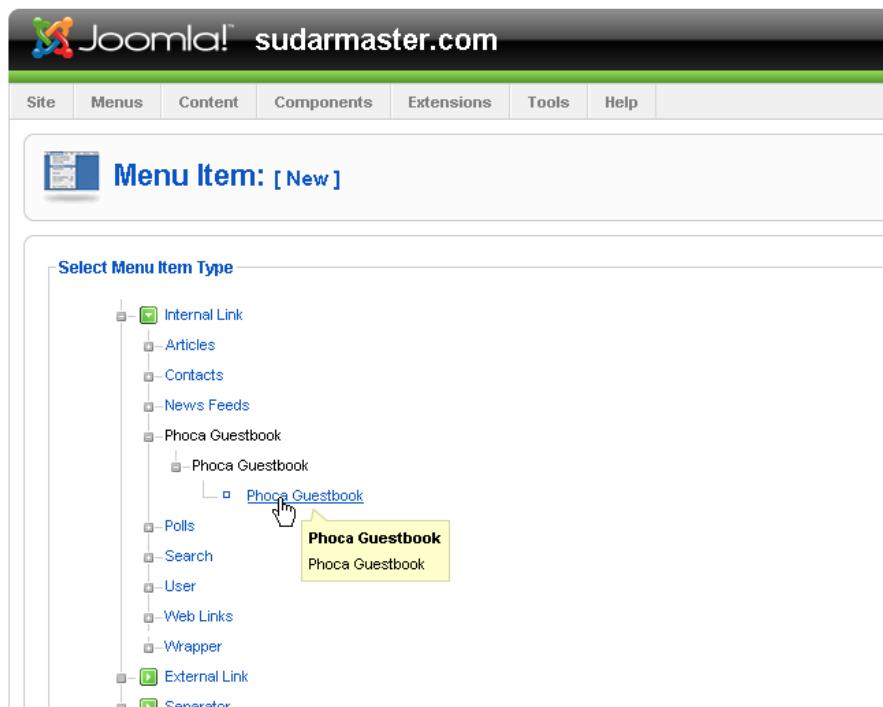

11. Klik Pocha Guestbook.

12. Klik Pocha Guestbook.

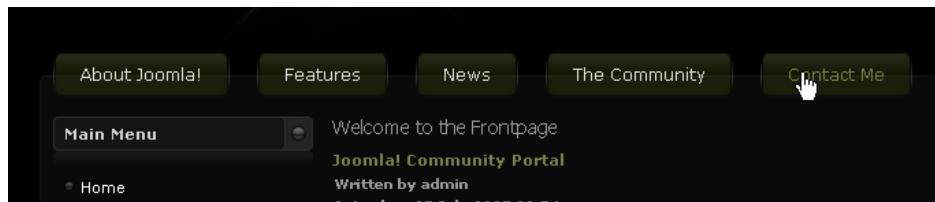

13. Isi title dan alias dan pilih Contact Me pada Select Guestbook lalu klik Save.

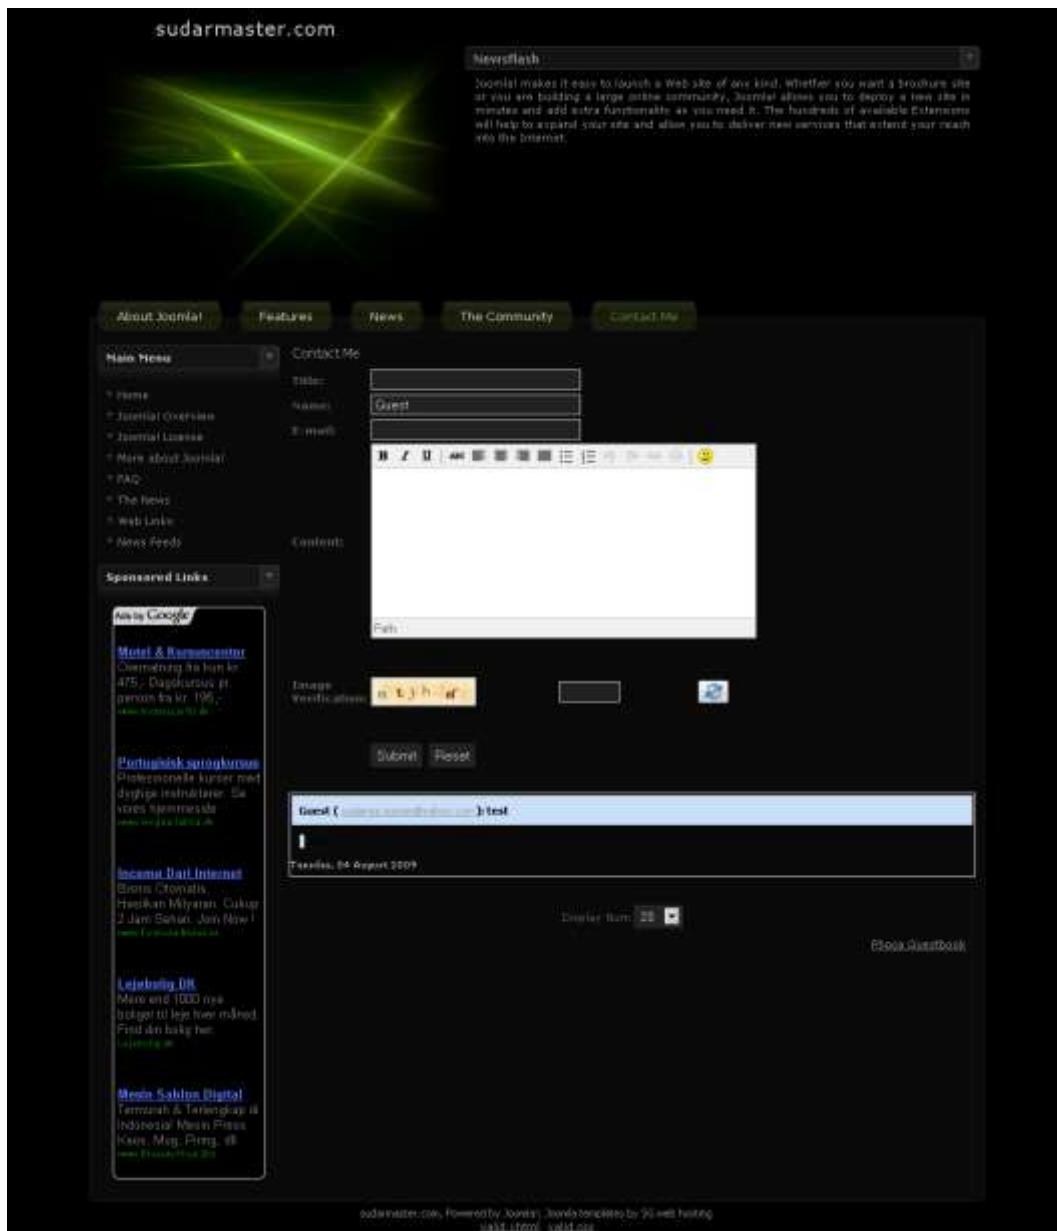

14. Refresh halaman muka website lalu klik Contact Me.

Tampilan buku tamu seperti gambar berikut.

Menulis Artikel Lebih Mudah

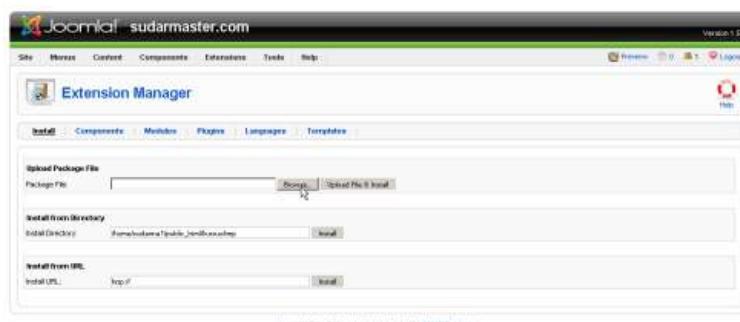

Saat akan menulis artikel yang bergambar, bila menggunakan fasilitas default, kita harus mengupload dulu gambar yang akan disisipkan. Hal ini bisa merepotkan. Supaya tidak selalu melakukan aktivitas tersebut, sebaiknya diinstall editor yang lebih ramah bagi pengguna awam. Salah satunya dengan menginstall plugin Tmedit. Dengan plugin ini, kita bisa menyiapkan gambar saat menulis artikel. Setelah dipublish, gambar akan otomatis diupload.

Untuk menginstalnya, ikuti langkah berikut.

1. Klik Extensions > Install/Uninstall.

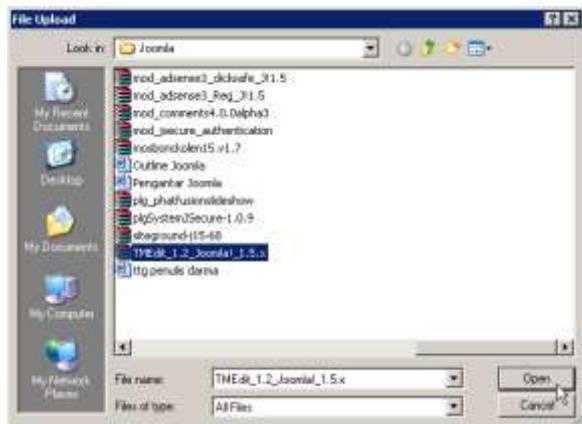

2. Klik Browse.

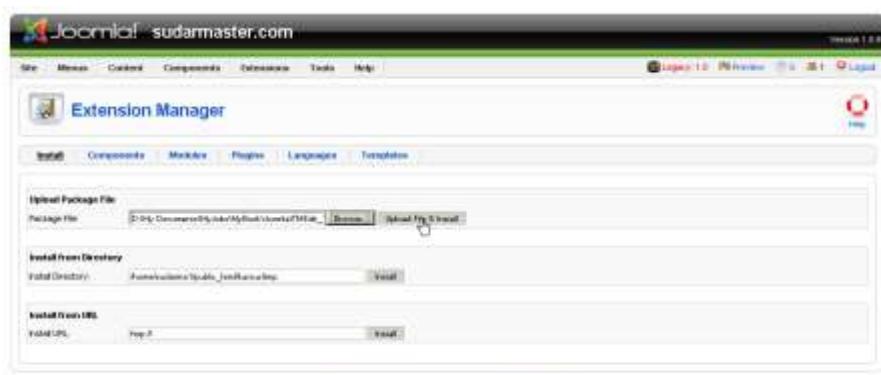

3. Pilih TMEdit_v1.2_J!_1.5.x lalu klik Open.

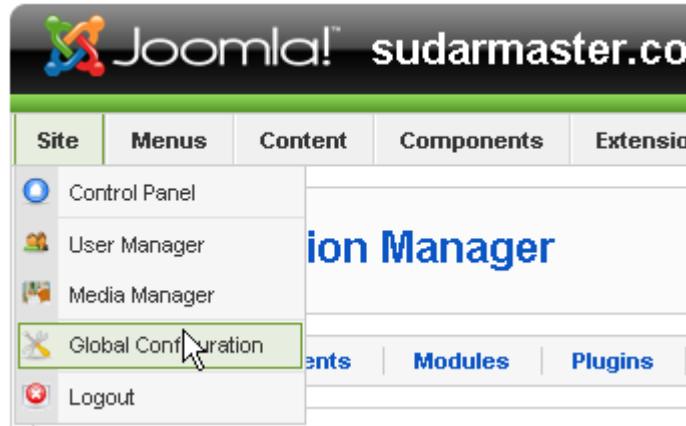

4. Klik Upload file & install.

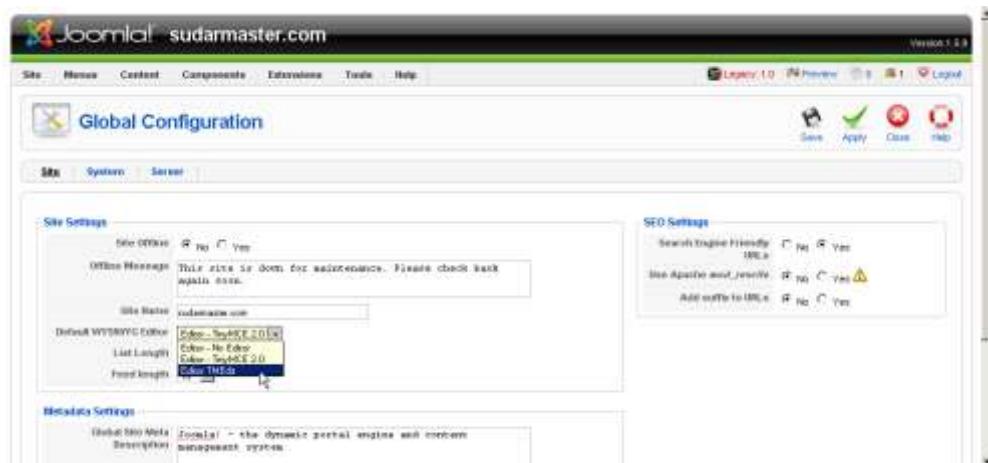

5. Klik Site > Global Configuration.

www.sudarma.info | www.sudarmaster.com | www.hostamasta.com | www.webtamasta.com

6. Pada Default WYSIWYG Editor, ganti Editor-TinyMCE 2.0 menjadi Editor-Tmedit. Klik Save.

Mencoba TMEdit

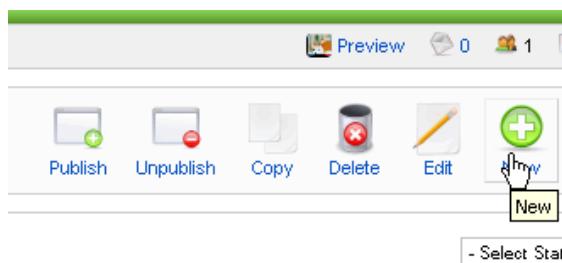

Setelah diinstal, kita bisa langsung mencobanya. Supaya lebih rapi, buat dulu section dan category dengan cara sebagai berikut.

1. Klik Content > Section Manager.

The screenshot shows the Joomla! 1.5.8 Admin Control Panel with the title 'Artikel'. The 'New' button in the toolbar is highlighted with a green box.

2. Klik New.

3. Isi title dan alias lalu klik Save.

The screenshot shows the Joomla! 1.5.8 Admin Control Panel with the title 'Section: [New]'. The 'Save' button in the toolbar is being hovered over by a cursor.

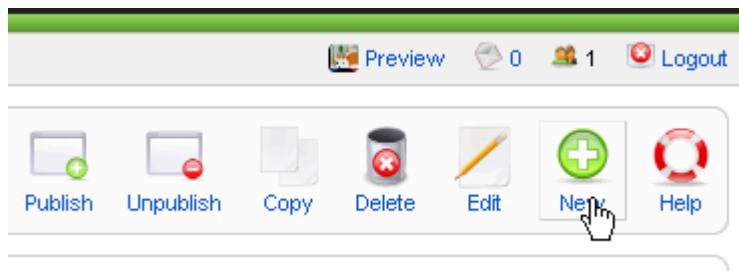

Lakukan hal yang sama untuk membuat section yang lain.

4. Klik Content > Category Manager.

Title	Published	Order	Access Level	#Categories	#Articles	#Visits
Blog	✓	1	Public	1	12	1
News	✓	2	Public	2	15	1
FAQ	✓	3	Public	4	22	2
Komputer	✓	4	Public	3	0	5
Internet	✓	5	Public	0	0	0

5. Klik New.

6. Isi title dan alias, lalu pilih Section. Klik Save.

The screenshot shows the Joomla! 1.5.9 Admin Control Panel with the 'Category: [New]' form open. The 'Title' field is populated with 'Blog'. The 'Section' dropdown menu is open, showing 'Beranda' as the selected option. Other sections like 'Berita', 'Produk', and 'Media' are also listed. The 'Save' button at the bottom right of the form is highlighted with a cursor. The top navigation bar shows 'Content > Category Manager'.

Buat kategori lain dengan cara yang sama.

#	Title	Published	Order	Access Level	Section	# Actions	# Items
1	The Project	✓	= 1	Public	Alamakot	0	0
2	The CMS	✓	= 2	Public	Alamakot	0	0
3	The Community	✓	= 3	Public	Alamakot	0	0
4	General	✓	= 1	Public	FACE	0	0
5	General Home	✓	= 2	Public	FACE	0	0
6	New Education	✓	= 3	Public	FACE	0	0
7	Languages	✓	= 4	Public	FACE	0	0
8	Test	✓	= 1	Public	Harriet	0	0
9	Education	✓	= 1	Public	Kopquier	0	0
10	Category	✓	= 2	Public	Kopquier	0	0
11	Latex	✓	= 1	Public	Merry	0	0
12	Hobbies	✓	= 2	Public	Merry	0	0

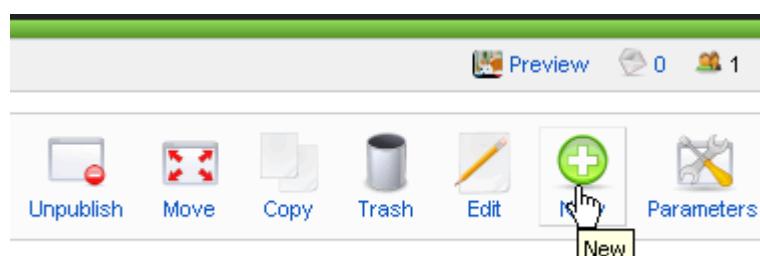

Setelah membuat section dan category, sekarang coba menulis artikel. Supaya lebih mudah, siapkan artikel yang akan dipublikasikan pada notepad atau Ms. Word. Caranya sebagai berikut.

1. Klik Content > Article Manager.

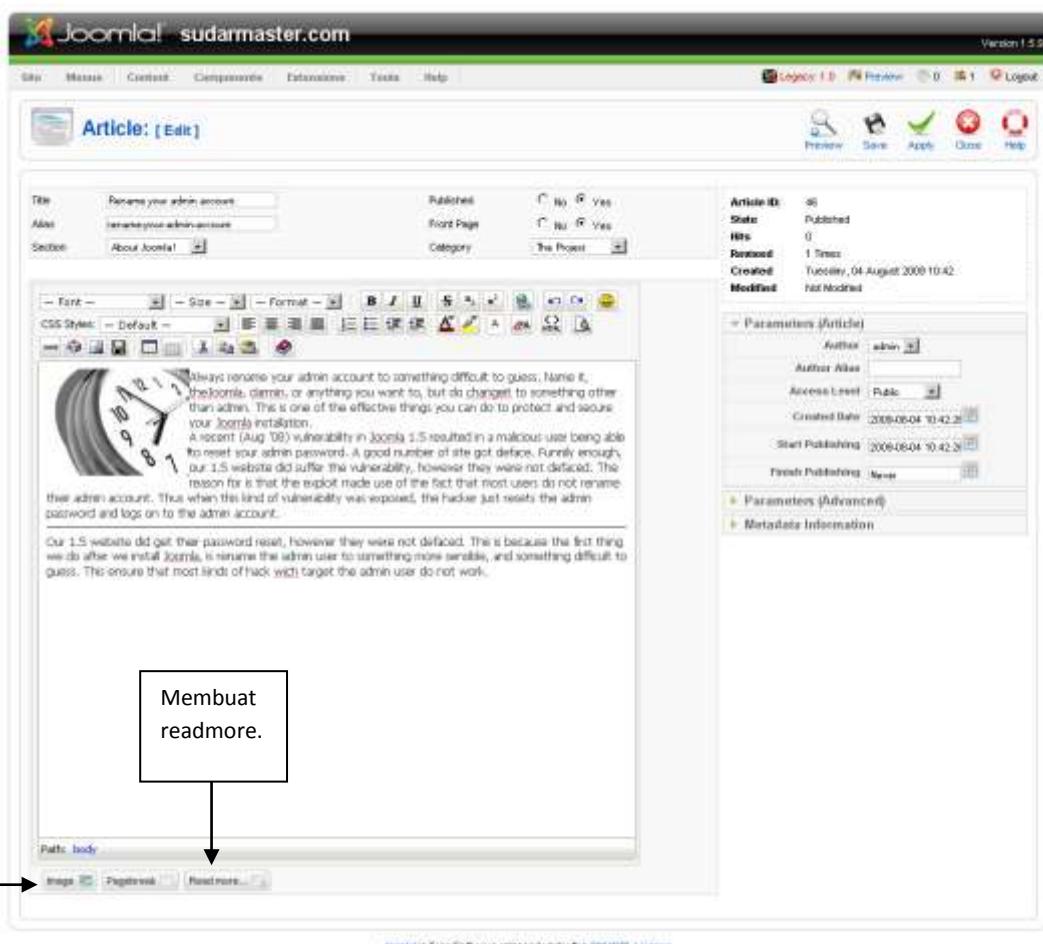

#	Title	Published	Order	Access Level	Type	Created
1	About Alamat	✓	= 1	Public	Article	10/10/2010 10:10:10
2	Features	✓	= 2	Public	Article	10/10/2010 10:10:10
3	Server	✓	= 3	Public	Image	10/10/2010 10:10:10

2. Klik New.

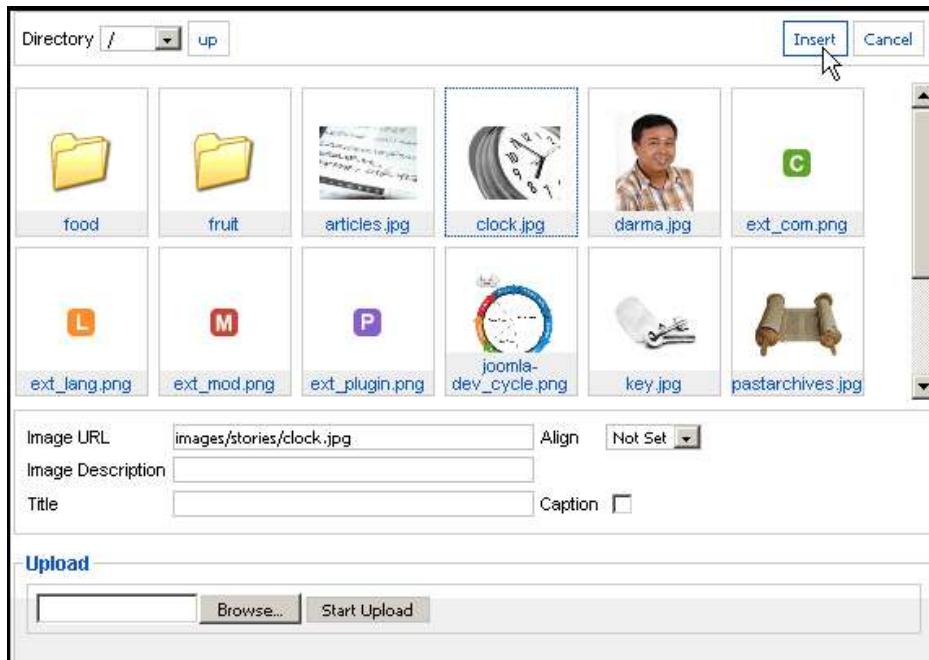

- Masukkan artikel ke teks editor. Untuk memenggal artikel, simpan pointer di akhir paragraph lalu klik Readmore. Untuk memasukkan gambar, klik Image.

- Jika gambar sudah ada, pilih salah satu gambar lalu klik Insert. Namun, bila belum ada, klik Browse lalu pilih gambar yang akan dimasukkan. Klik Start Upload.

5. Hasilnya seperti gambar berikut.

The screenshot shows the Joomla! 1.5.2 article editor. The article title is "Rename your admin account" and the alias is "rename-your-admin-account". The section is "About Joomla!". The published status is checked. The article content area contains the following text:

Always rename your admin account to something difficult to guess; Name it, jeholomie, dmin, or anything you want to, but do change it to something other than admin. This is one of the effective things you can do to protect and secure your Joomla installation.

A report (Aug '08) vulnerability in Joomla 1.5 resulted in a malicious user being able to reset your admin password. A good number of site got deface. Funny enough, our 15 website did suffer the vulnerability, however they were not defaced. The reason for is that the exploit made use of the fact that most users do not rename their admin account. Thus when this kind of vulnerability was exploited, the hacker just needs the admin password and logs on to the admin account.

Our 15 website did get their password reset, however they were not defaced. This is because the first thing we do after we install Joomla, is rename the admin user to something more sensible, and something difficult to guess. This ensure that most kinds of hack will target the admin user do not work.

6. Ketik judul artikel dan alias. Tentukan juga section dan category lalu klik Save.

The screenshot shows the Joomla! administrator interface for editing an article. The title is "Reserve your admin account", the alias is "reserve-your-admin-account", and the section is "About Joomla!". The published status is set to "Yes". The category is "The Project". On the right side, there is a summary of the article's details: Article ID: 46, State: Published, Hits: 0, Revised: 1 Time, and Created: Tuesday, 04 August 2009 10:42. Below the form are buttons for Print, Save, Apply, and Close.

Jika berhasil, artikel di halaman utama situs seperti gambar berikut ini.

Mengupload Website ke Server Hosting

Setelah selesai membuat website di komputer lokal, saatnya kini memublikasikannya ke internet. Supaya bisa diakses di internet, tentu kita harus menyewa domain dan hosting. Biasanya, lama berlangganan bisa bulanan atau tahunan. Sebaiknya, jika baru mencoba, jangan berlangganan terlalu lama. Jika pelayanan dari pemilik hostingnya tidak memuaskan, Anda bisa berpindah hosting tanpa harus menunggu waktu yang lebih lama.

Mencari Domain dan Hosting

Jika Anda serius memiliki website, sebaiknya mencari domain dan hosting yang berbayar. Selain lebih aman, kita bisa langsung konsultasi ke pemilik hosting bila terjadi kesalahan saat proses instalasi maupun ketika mengedit situs.

Banyak penyedia layanan hosting dan domain yang berbayar, baik yang murah maupun mahal. Berhati-hatilah ketika akan berlangganan. Kalau perlu, periksa alamat pemiliknya untuk menghindari penipuan. Sebaiknya, ajak ngobrol terlebih dahulu costumer service yang ditampilkan di halaman utama web hosting untuk memastikan apakah pelayanan mereka baik atau tidak.

Salah satu hosting yang saya gunakan adalah <http://hostamasta.com>.

Menginstal Joomla! di Fantastico

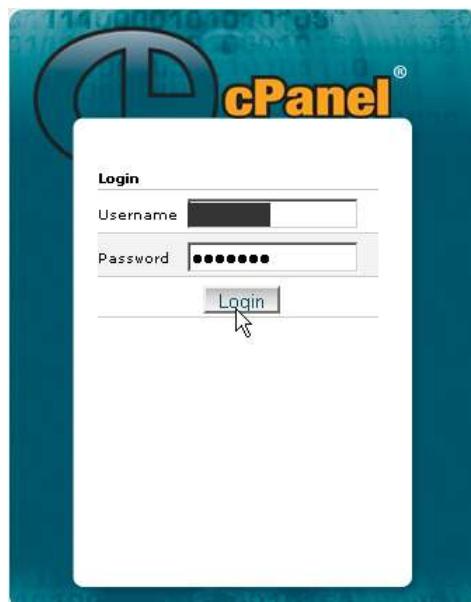

Setelah akun diaktifkan, Anda bisa langsung mengistal Joomla! di fantastico dan mengupload file Joomla! yang ada di komputer lokal.

Fantastico terdapat di control panel. Jadi, Anda harus login ke control panel untuk mendapatkannya. Caranya sebagai berikut:

www.sudarma.info | www.sudarmaster.com | www.hostamasta.com | www.webtamasta.com

1. Buka control panel Anda. Biasanya terdapat di <http://namadomain/cpanel>. Misalnya, <http://www.pasar-buku.com/cpanel>. Masukkan username dan password yang diberikan saat registrasi.

2. Klik Fantastico, di control panel.

3. Klik Joomla. Jika Anda ingin menginstal Joomla! 1.5, klik Joomla 1.5.

Pilihan install Joomla (pilih Joomla 1.5 bila ingin menggunakan versi ini).

The screenshot shows the Control Fantastico Panel interface. On the left, there's a sidebar with various script categories: Navigation (Fantastico Home, Control Panel Home), Blogs (b2evolution, Nucleus, WordPress), Content Management (Drupal, Geeklog, Joomla 1.5, Joomla, PHPuke), and others like Siteframe, TYPO3, Xoops, Customer Relationship, Crafty Syntax Live Help, Help Center Live, osTicket, and PerlDesk. An arrow points from a text box on the left to the 'Joomla' link under 'Content Management'. The main right panel is titled 'Fantastico' and contains a brief introduction about automatically installing scripts. It features a 'UPDATE NOW!' section with a note about keeping installations up-to-date. Below that, it shows a table for Joomla installations:

Joomla Location	Installed Version	Upgrade Link
/	1.0.13	Upgrade to 1.0.15

There's also a section for 'Old backup files removal' with a checkbox for '.backup.1207034054.tgz' and a 'Delete' button.

4. Klik New Instalation.

New Installation (1.0.15)
 Disk space required: 12.4 MB
 Disk space available: 42.5 MB

Pilihan
instalasi baru
untuk
Joomla.

5. Isi formulir yang disediakan lalu klik instal Joomla.

Pilihan lokasi domain yang akan diinstal.

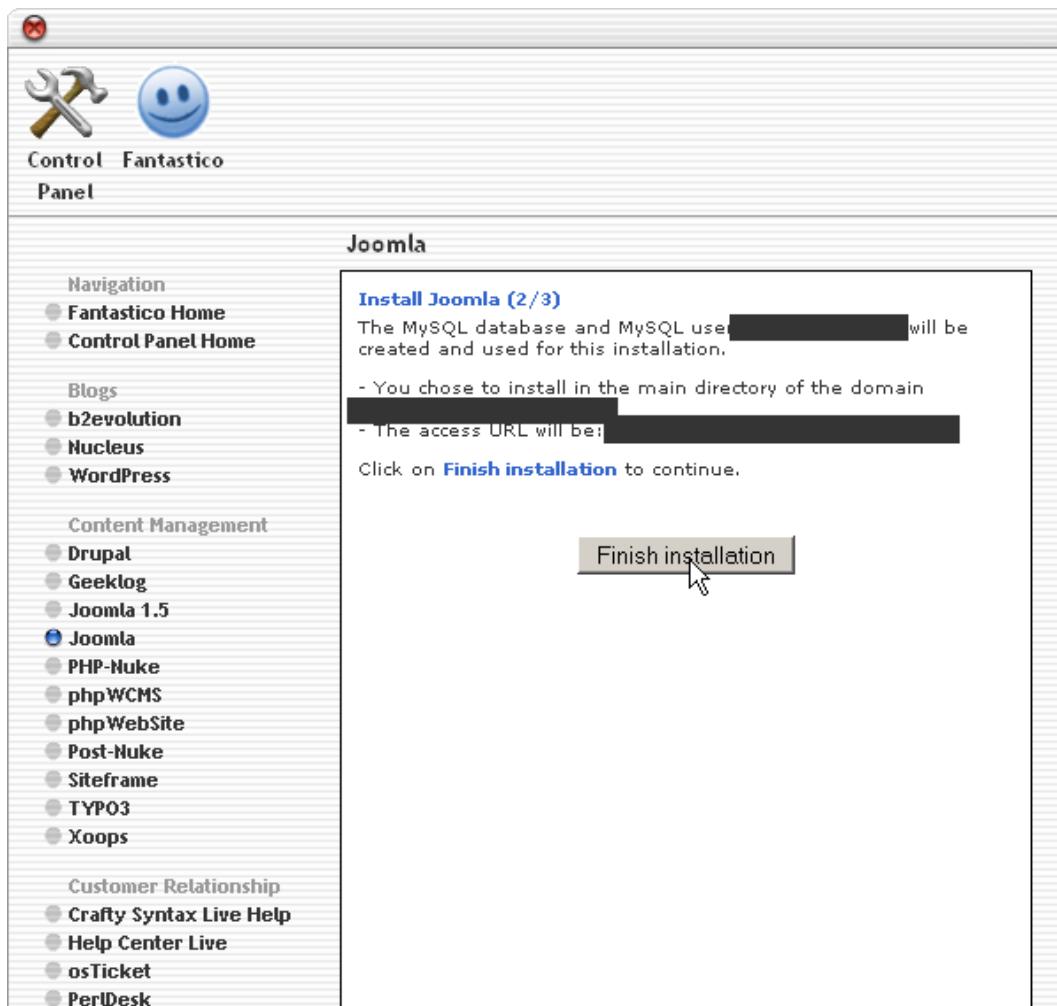

Jika ingin menginstal dalam sebuah folder pada domain yang dipilih, masukkan nama foldernya.

Masukkan user admin dan password.

Masukkan email, nama admin, dan nama situs.

6. Klik Finish installation.

Tunggu beberapa detik, sampai instalasi selesai.

The screenshot shows the Control Fantastico Panel interface. On the left, there's a sidebar with various application icons and their names: Control Fantastico Panel, Joomla, Navigation, Fantastic Home, Control Panel Home, Blogs, b2evolution, Nucleus, WordPress, Content Management, Drupal, Geeklog, Joomla 1.5, Joomla, PHP-Nuke, phpWCMS, phpWebSite, Post-Nuke, Siteframe, TYPO3, Xoops, Customer Relationship, Crafty Syntax Live Help, Help Center Live, osTicket, and PerlDesk.

The main area is titled "Joomla" and shows the "Install Joomla (3/3)" step. It includes a "Please notice:" section with instructions about auto-installation and auto-configuration, and a "DO NOT REMOVE" warning about a specific file. There are "Back to Joomla overview" and "Email the details of this installation to:" buttons.

Setelah selesai, buka situs Anda.

Mengupload File ke Hosting

Jika Anda menginstal Joomla secara offline, kini bisa Anda upload ke situs Anda. Namun, tidak semua file harus diupload. Sebenarnya, jika Anda tau file mana saja yang bukan default Joomla, bisa file itu saja yang diupload. Jika Anda tidak yakin, Anda bisa upload folder berikut:

1. Administrator
2. Component
3. Mambots
4. Templates
5. Images
6. Module

File atau folder lain tidak perlu diupload.

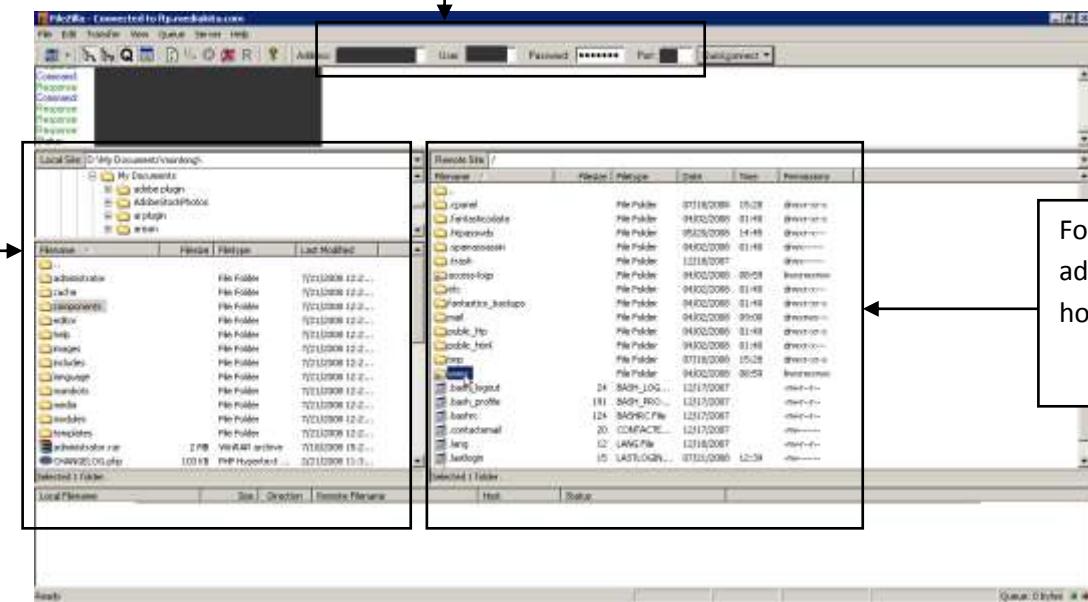

Cara mengupload yang paling mudah adalah menggunakan software ftp (bisa Anda download di control panel situs Anda, atau yang disediakan pada CD buku ini), terutama hosting yang tidak mendukung file zip. Jika mendukung file zip, Anda bisa menguploadnya melalui file manager (control panel). Saat diupload, otomatis akan unzip sendiri.

Jika menggunakan software ftp, caranya sebagai berikut:

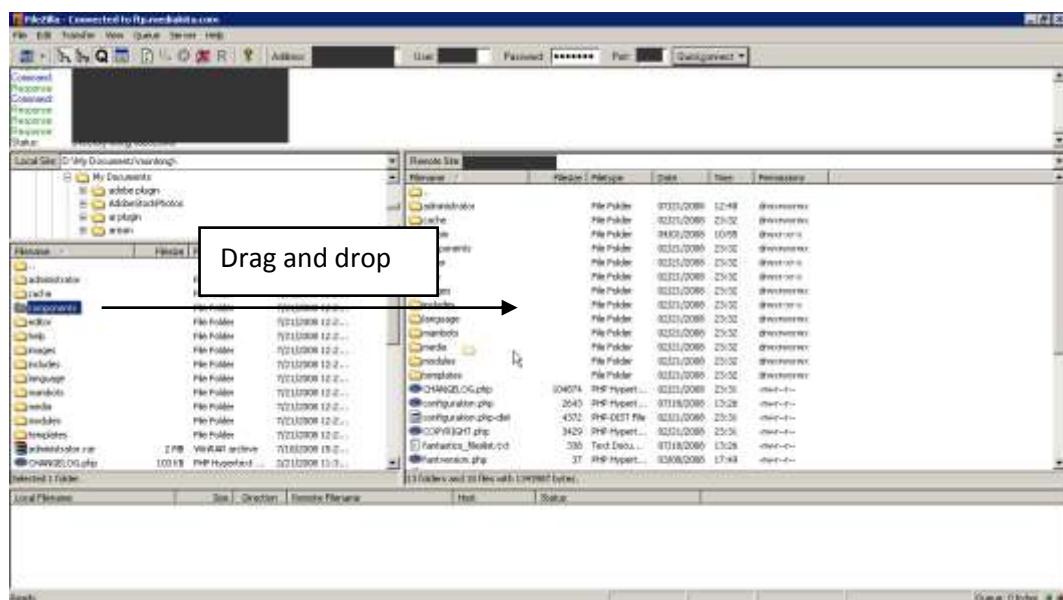

1. Buka software ftp yang telah Anda install.
2. Isi kotak yang disediakan:
 - Address: ftp.namadomain.com
 - Username: username ftp
 - Password: password
 - Port: kosongkan
3. Klik Quick connect.

Masukkan alamat ftp, username, dan password.

4. Klik dua kali folder www. Jika Anda menginstal di <http://www.namadomain.com>.

Drag and drop semua folder di sini. Tunggu sampai selesai.

Setelah selesai, import database Anda yang diinstal di lokal ke situs Anda.

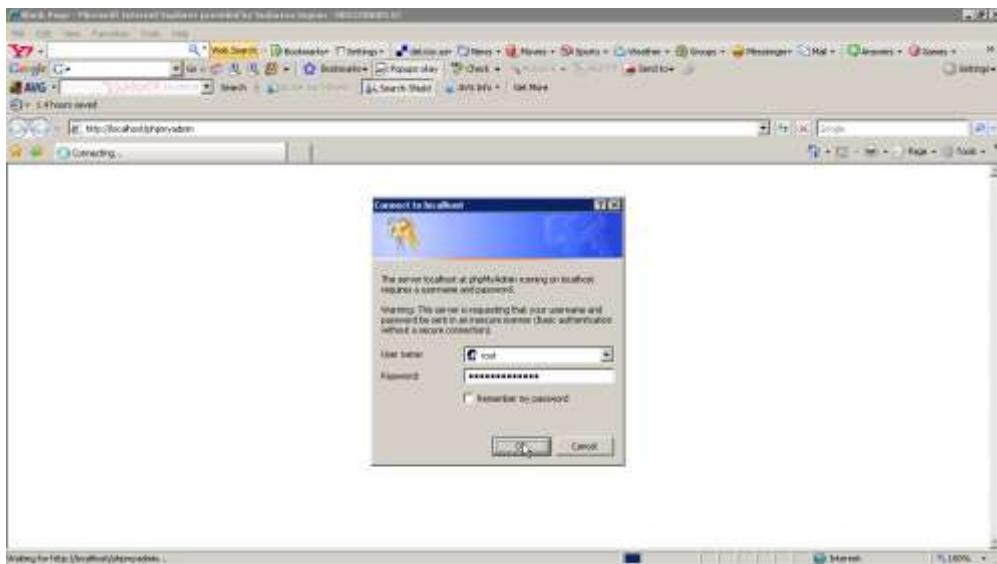

Eksport dan Import Database

Setelah semua folder diupload, kini saatnya untuk mengimport database dari lokal ke web hosting.

Export Database

Sebelum diimport, Anda harus mengeksport terlebih dahulu database di komputer lokal. Caranya sebagai berikut:

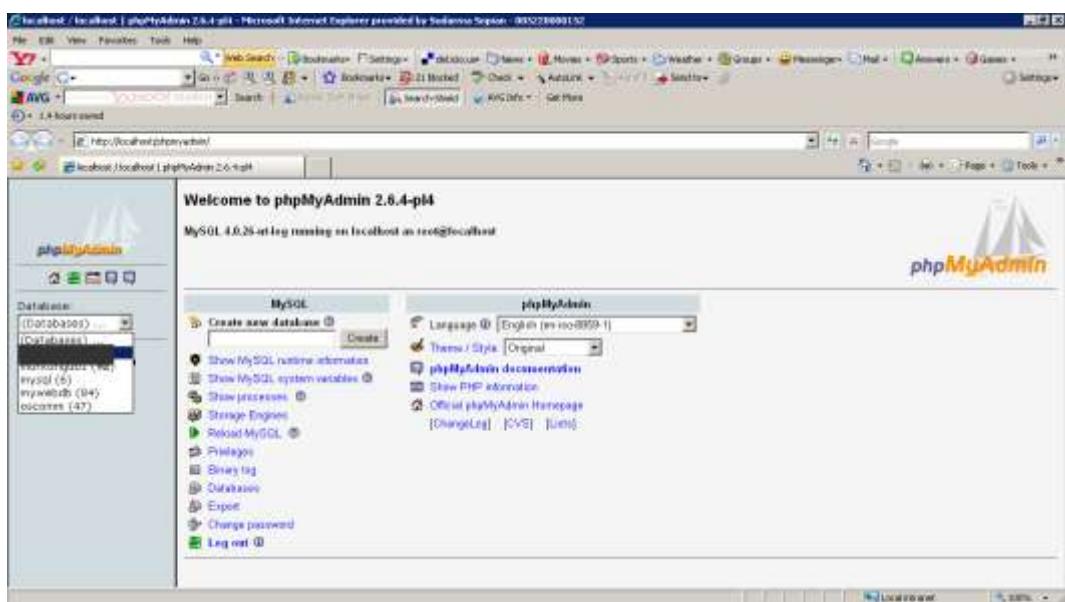

1. Buka browser, lalu ketik `http://localhost/phpmyadmin`. kemudian, tekan Enter.

Masukkan username dan password. Jika saat menginstal tidak memasukkan password, isi username root dan kosongkan password. Klik OK.

2. Pilih nama database.

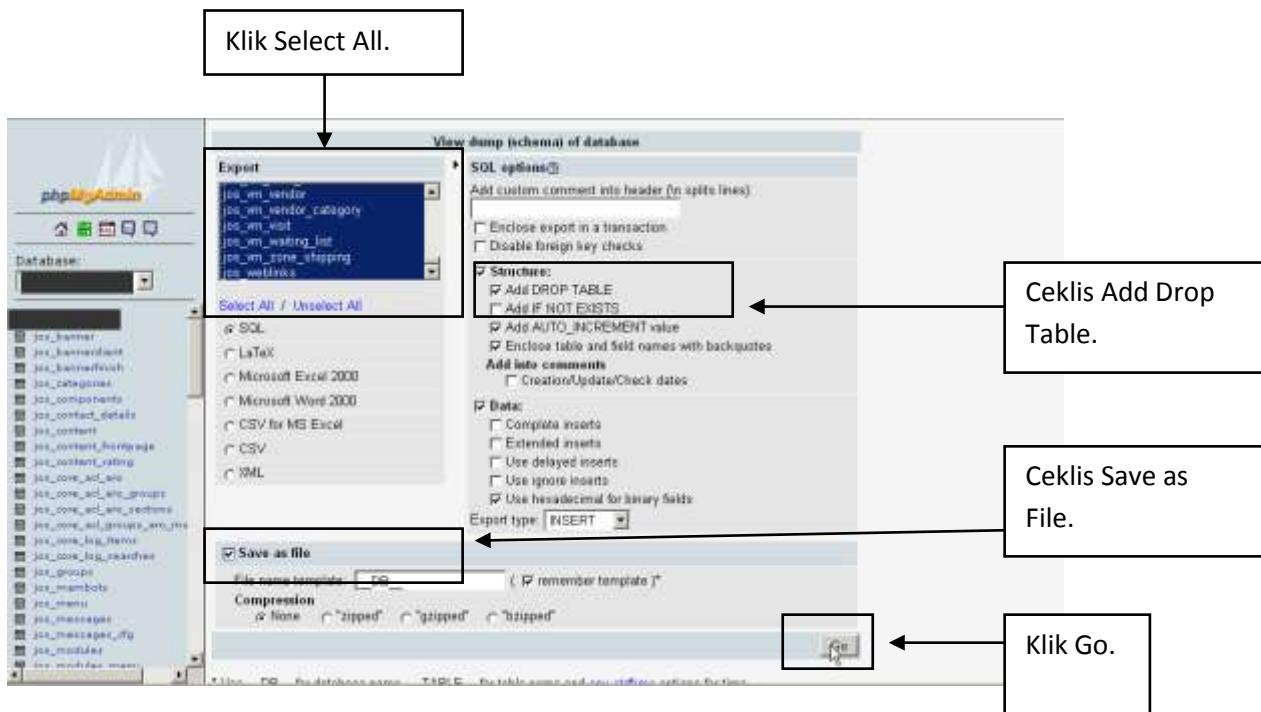

3. Klik Export.

jee_messages		34		In use
jee_messages_cfg		34		In use

4. Klik OK.

5. Simpan database.

Import Database

Setelah selesai export database, sekarang kita bisa mengimport database ke webhosting. Caranya sebagai berikut:

1. Pada control panel, klik phpMyAdmin.

2. Setelah muncul halaman phpMyAdmin, klik Import.

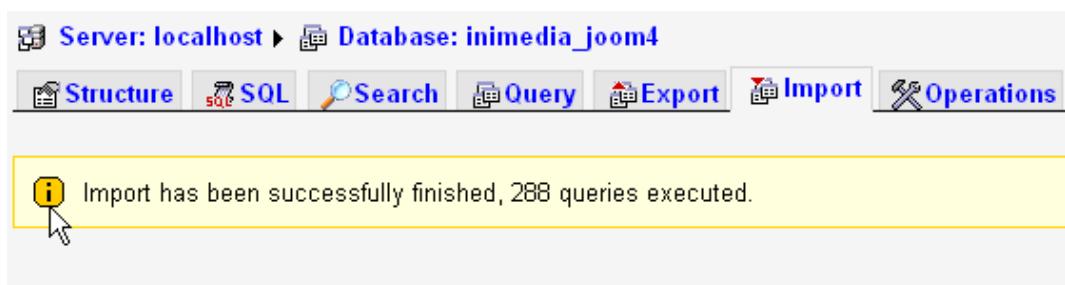

3. Klik database yang telah dieksport di komputer lokal. Klik Open.

4. Klik Go.

Jika sukses, akan ada informasi bahwa database telah berhasil diimport.

Sekarang, coba buka browser, lalu ketik alamat situs Anda. Pada contoh kali ini, buka <http://www.pasar-buku.com>. Hasilnya seperti gambar di bawah ini. Tampilan beserta isinya, akan sama seperti saat kita menginstal di komputer lokal.

Mudah bukan? Jika masih terasa kurang, Anda bisa menginstal komponen maupun modul ketika sudah online. Caranya sama seperti yang telah dijelaskan pada bab-bab sebelumnya.

Mempromosikan Website

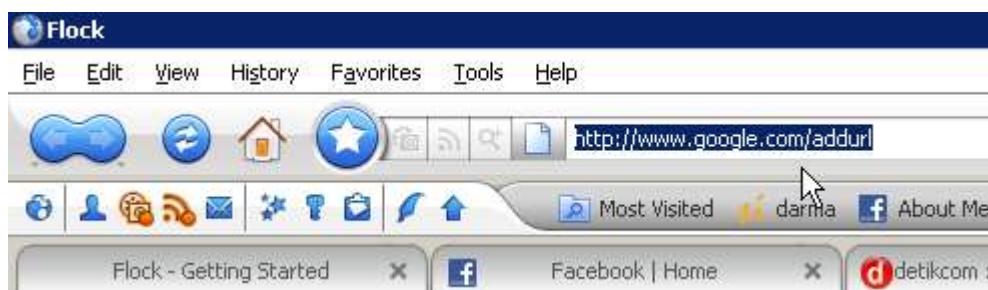

Setelah membuat website, tentu saja kita harus mempromosikannya supaya website kita banyak dikunjungi. Promosi bisa dilakukan secara online maupun offline. Pada kesempatan kali ini, saya akan memberikan contoh cara promosi online maupun offline.

Promosi Online

Banyak cara melakukan promosi secara online. Baik melalui mesin pencari, iklan baris, mengunjungi web/blog orang lain, dan lain sebagainya.

Berikut ini salah satu cara promosi melalui mesin pencari Google.

1. Buka <http://www.google.com/addurl>.

2. Isi formulir yang disediakan lalu klik Add URL.

Masukkan alamat situs.	<input type="text" value="http://www.sudarma.info/"/> URL
Comments:	
Masukkan sedikit informasi mengenai situs tersebut.	optional: To help us distinguish between sites submitted by individuals and those automatically entered by software robots, please type the squiggly letters shown here into the box below.
Masukkan kode yang muncul.	 <input type="text" value="teragali"/>
	<input type="button" value="Klik Add URL."/> <input type="button" value="Add URL"/>

Situs yang Anda masukan tidak otomatis akan muncul di halaman pencarian Google. Akan ada proses indexing oleh Google yang bisa memakan waktu beberapa hari. Setelah

www.sudarma.info | www.sudarmaster.com | www.hostamasta.com | www.webtamasta.com

beberapa hari, situs Anda akan muncul ketika dicari di Google. Supaya situs Anda bisa selalu muncul di halaman pertama, Anda harus belajar lebih lanjut mengenai SEO (Search Engine Optimization).

Selain Google, Anda juga bisa mendaftarkan situs Anda di situs berikut.

- <http://www.google.co.id/addurl>
- <http://submit.search.yahoo.com/free/request>
- <http://addurl.altavista.com/addurl/new>
- http://addurl.alltheweb.com/add_url
- <http://submit2.jayde.com/>
- <http://overture.com/d/about/advertisers/>
- <http://addme.com>
- <http://freewebsubmission.com>
- <http://submitawebiste.com>
- <http://directory-search.org>
- <http://positiontech.com/inktomi>

Jika Anda ingin memasang iklan baris, bisa dipasang di situs berikut:

- <http://www.detik.com>
- <http://www.okezone.com>
- <http://yellowpages.com>
- <http://yellowpages.co.id>
- <http://e-traderworld.com>
- <http://classifiedads.com>
- <http://export-import-companies.com>
- <http://businessinternetdirectory.com>

Kita juga bisa memanfaatkan situs jejaring sosial atau forum untuk berpromosi. Namun, harus diperhatikan etika ketika melakukannya. Jangan terlalu sering atau memaksa orang lain untuk melihatnya.

Promosi Offline

Selain online, kita juga bisa mempromosikan situs kita secara offline. Promosi yang bisa dilakukan di antaranya:

- Membuat kartu nama
- Membuat kaos
- Membuat stiker
- Menempel sticker di kendaraan
- Memasang iklan di surat kabar

Tentang Penulis

Sudarma Sopian, lahir di Sumedang, 5 September 1980. Anak pertama dari empat saudara ini, mulai tertarik di bidang menulis, sejak April 2008. Meskipun sudah memiliki blog sejak tahun 2006, tetapi mulai menulis artikel di blog tersebut pada bulan April 2008.

Saat ini, sudah memiliki istri yang bernama Nany Nurdyany. Dari pernikahan kami, Alhamdulillah sudah dikarunia seorang putri, yang bernama Nikeisha Ainun Mahya.

Sampai saat ini, dia sudah menulis lima buah buku di mediakita, yaitu:

1. Joomla! Cara Cepat & Mudah Membuat Website – bersama Erima Onetto
2. 120 Tip & trik Mengoptimalkan Windows XP
3. Tip & Trik Seputar Laptop
4. Buku Pintar Menguasai Internet – bersama Jarot S. dan Shenia A.
5. Buku Pintar Menguasai Multimedia – bersama Jarot S. dan Shenia A.
6. Joomla! Cara Cepat & Mudah Membuat Toko Online
7. Tip & Trik Membuat Blog Lebih Dahsyat

Jika Anda ingin konsultasi, bisa menghubungi dia, melalui:

Email	: darma@sudarma.info
Blog	: www.sudarma.info
Website	: www.sudarmaster.com
Facebook	: http://fb.sudarmaster.com
Webhosting	: www.hostamasta.com
Solusi bisnis online	: www.webtamasta.com

Saya juga menerima private membuat web instan untuk wilayah Jakarta atau private online untuk seluruh Indonesia. Jika Anda berminat, silakan hubungi saya: 021-70599499. Atau, Anda juga bisa mendaftarkan diri di <http://webtamasta.com>.
